RE: I.95-02-015; R.96-11-004

Dear Docket Clerk:

Enclosed for filing with the Commission are the original and five copies of the **SOUTHERN CALIFORNIA EDISON COMPANY'S (U 338-E) ANNUAL REPORT OF 2001 ACTIVITIES FILED PURSUANT TO GENERAL ORDER NO. 165** in the above-referenced proceeding.

We request that a copy of this document be file-stamped and returned for our records. A self-addressed, stamped envelope is enclosed for your convenience.

Your courtesy in this matter is appreciated.

Very truly yours,

David R. Garcia

SOUTHERN CALIFORNIA EDISON COMPANY'S (U 338-E) ANNUAL REPORT OF 2001 ACTIVITIES FILED PURSUANT TO GENERAL ORDER NO. 165

Pursuant to General Order No. 165 ("G.O. 165") and Decision No. 97-03-070 issued by the California Public Utilities Commission (the "Commission"), and to Rule 32 of the Commission's Rules of Practice and Procedure (Title 20, *Cal. Code Reg'ns* § 32), Southern California Edison Company ("SCE") hereby files its 2001 Annual Compliance Report describing our compliance activities completed in 2001 and compliance activities planned for 2002.

I.

INTRODUCTION AND SUMMARY

In 2001, SCE completed 4,499 circuit patrols, 456,130 detailed and intrusive inspections, and 13,347 corrective actions. This report includes two attachments incorporated herein by this reference: Attachment A is a table containing summary data of SCE's compliance activities for 2001 presented on a system wide basis. Attachment B contains a series of tables providing a

detailed presentation of SCE's 2001 compliance activities, by equipment type, with work location by work location breakdowns.

II.

BACKGROUND

California Public Utilities Code Section 364[1] requires the Commission to adopt standards for the inspection, maintenance, repair, and replacement of electric utility distribution facilities. Subdivision (b) of that section provides that, in setting standards for maintenance, repair, and replacement, the Commission shall consider cost, local geography and weather, applicable codes, national electric industry practices, sound engineering judgment, and experience.

In Decision No. 96-09-045, the Commission adopted reporting and recording requirements for electric system reliability and for individual circuits that persistently perform poorly. In Decision No. 96-09-073, the Commission proposed standards for tree trimming and vegetation management around utility distribution and transmission facilities in urban and suburban areas. In Decision No. 96-11-021, the Commission proposed standards for electric distribution system inspections. These proposed rules specified certain inspection intervals for overhead and underground facilities.

Finally, in Decision No. 97-03-070, effective March 31, 1997, the Commission adopted G.O. 165, which established minimum inspection requirements for certain electric distribution facilities (including maximum allowable inspection cycle lengths), condition rating, and recordkeeping and reporting on scheduling and performance of corrective action. These G.O. 165

---

1 All code references are to the California Public Utilities Code unless otherwise noted.

requirements are in addition to the requirements imposed upon utilities under General Order Nos. 95 and 128 to maintain a safe and reliable electric system. G.O. 165 further imposed the following reporting requirements.

> Each utility shall submit to the Commission an annual report detailing its compliance with the general order. These reports will include the utility's plans for the types of inspections and equipment to be inspected during the coming year. The report shall identify the number of facilities, by type, which have been inspected during the previous period. It shall identify those facilities which were scheduled for inspection but which were not inspected according to schedule and shall explain why the inspections were not conducted, and a date certain by which the required inspection will occur. The report shall also present the total and percentage breakdown of equipment rated at each condition rating level, including that equipment determined to be in need of corrective action. Where corrective action was scheduled during the reporting period, the report will present the total and percentage of equipment which was and was not corrected during the reporting period. For the latter, an explanation will be provided, including a date certain by which required corrective action will occur. The report will also present totals and the percentage of equipment in need of corrective action, but with a schedule date beyond the reporting period, classified by the amount of time remaining before the scheduled action. All of the above required information shall be presented for each type of identified facility and shall be aggregated by district.[2]

---

[2] G.O. 165, Section IV.

III.

SUMMARY OF SCE'S INSPECTIONS AND CORRECTIVE ACTION ACTIVITIES DURING CALENDAR YEAR 2001

G.O. 165 requires annual inspection performance data, condition ratings, and corrective action information. The following is a narrative summary of the required data. In addition, Attachment A contains a tabular summary of data and Attachment B provides a detailed breakdown of data for each distribution work location.

A. Patrols

As defined in G.O. 165, a circuit patrol is a visual inspection of all distribution facilities, excluding streetlights, which are inspected separately.

1. Urban Circuit Patrols

G.O. 165 requires annual patrol of all urban circuits. In 2001, SCE completed 114% of the planned number of circuit patrols. Although many circuits were patrolled twice, 98% of our urban circuit inventory received a patrol during the calendar year, leaving a balance of 2% (83) urban circuits not patrolled during 2001. In implementing a new work management system in which inspection and maintenance data are tracked, SCE experienced temporary data conversion and reporting issues during the Fourth Quarter of 2001; as a result, SCE temporarily lost visibility concerning the status of certain circuit patrols. SCE has since confirmed that the balance of 83 circuits not patrolled during 2001 have been patrolled as of the date of this filing.[3]

---

[3] SCE is in the process of implementing its new automated Work Management System. As is typical in the implementation of a major new data management system, substantial

Continued on the next page

2. Rural Circuit Patrols

G.O. 165 requires biennial patrol of rural circuits. SCE routinely patrols more rural circuits than required by GO 165. In 2001, we completed 111% of the planned number of rural circuit patrols including all the specific circuits due for inspection in 2001.

3. Streetlight Patrols (Urban and Rural)

G.O. 165 requires annual patrol of all urban streetlights, and biennial patrol of all rural streetlights. In the 2000 Annual Report, SCE reported that in 2001 we planned to patrol 100% of our urban and none of our rural streetlight inventory (a total then of 558,541 streetlights). In 2001, SCE met this requirement, actually patrolling 100% of our urban streetlight inventory (a total of 566,482 streetlights). The increase in the year-end streetlight inventory (from 558,541 to 566,482) is due to new construction during the course of the year.

B. Intrusive and Detailed Inspections

1. Generally

In the 2000 Annual Report, SCE reported we planned to complete 450 overhead detailed inspections, 56,439 underground and pad-mounted equipment detailed inspections and 50,000 wood pole intrusive inspections in 2001. SCE actually completed 1,322 overhead detailed inspections, 107,073 underground and pad-mounted equipment detailed inspections and 120,796 wood pole intrusive inspections in 2001. This represents 294% of the planned

---

Continued from the previous page

data conversion and verification are required, and this process is continuing. SCE will file a supplement to this Annual Report should the completion of this data conversion and verification process yield material changes to the figures reported herein.

overhead detailed inspections, 190% of the planned underground and pad mounted equipment detailed inspections and 242% of the planned wood pole intrusive inspections. In fact, SCE has increased actual inspections from 126,295 in 1998 to 198,010 in 1999, to 355,801 in 2000, and to 456,130 in 2001. This represents a 361% increase in detailed and intrusive inspections conducted from 1998 to 2001. As required by G.O. 165 for specific types of equipment, SCE assigned condition ratings based on those detailed inspections and intrusive inspections, as discussed in Section C, below.

2. Intrusive Inspections

In the 2000 Annual Report, SCE reported our plan to complete a total of 50,000 intrusive inspections of wood poles in 2001. During 2001, SCE completed a total of 120,796 intrusive inspections. Although SCE completed 242% of the planned inspections, we report a remaining balance of 14,793. The reason for the remaining balance is that the specific locations of some of the wood poles intrusively inspected were changed in order to coordinate with other activities. Safety, reliability, maintenance and new business activities may include wood pole intrusive inspection to insure structural integrity before work is performed. As such, the planned intrusive program is adjusted in conjunction with these activities wherever they occur throughout the service territory during the course of the year. Intrusive inspections originally planned as part of the GO 165 compliance program for some areas are replaced by the intrusive inspections performed in support of safety, reliability, maintenance and new business activities in other areas. As a result, some work locations planned to be covered were not inspected, as reflected in the balance shown in Table A, while other areas were inspected even though they were not part of the 2001 plan. Overall, our GO 165

compliance plan is on track to have all poles older than 15 years (as of 1997) receive their first intrusive inspection by March 31, 2007. In accordance with this plan, SCE plans to complete intrusive inspection of 80,000 poles in 2002.

3. Overhead Detailed Inspections

In the 2000 Annual Report, we reported our plan to complete 450 detailed inspections in 2001. In fact, SCE completed 1,322 detailed inspections, or 294% of the 2001 planned inspections. In the 2000 Annual Report, SCE reported that we planned to have all circuits receive a first round of detailed inspections by December 31, 2002, the end of the fifth year after the effective date of G.O. 165 (the "five-year requirement"). SCE subsequently decided that every circuit would have a detailed inspection by March 31, 2002, within the five years of the effective date of G.O. 165. Consequently, SCE accelerated its inspection schedule to accommodate a total of 460 detailed inspections during the Fourth Quarter of 2001 and 487 detailed circuit inspections during the First Quarter of 2002[4]. As a result, SCE can now report that all circuits did receive a first round of detailed inspections by March 31, 2002. This explains the extraordinary increase in detailed inspections over the planned number reported in the 2000 Annual Report.

In the 2000 Annual Report, SCE had planned a number of detailed inspections of overhead capacitors and regulators to be completed in 2001 that were not required to be completed in 2001, as a part of a program to

---

4 SCE increased the number of wood pole structures detail inspected from approximately 279,200 in 2000, to 426,200 in 2001, to 298,200 in the first quarter of 2002. At the same time, the number of non-conformances identified per pole increased from 1.0 non-conformances identified per pole in 2000 to 1.1 non-conformances identified per pole in 2001 and 2002.

levelize future inspection activities ("prescheduled inspections"). In 2001, SCE did complete all planned overhead capacitor and regulator detail inspections that were *required* for 2001, but did not complete all of the planned overhead capacitor and regulator detail inspections that had been "prescheduled" under the levelized plan. Thus, the balance of 396 overhead capacitor detail inspections and 14 overhead regulator detail inspections shown in this Annual Report consists of inspections not due until some time in 2002 and/or future years.

4. Underground and Pad Mounted Equipment Detailed Inspections

In the 2000 Annual Report, we reported our plan to complete 56,439 underground and pad mounted equipment detailed inspections. SCE actually completed 107,073 underground and pad mounted equipment detailed inspections, or 190% of the planned inspections. Even though SCE far exceeded the number of planned inspections in aggregate, there remained a balance of 20 underground and 7 pad mounted equipment detailed inspections (not including pad mounted capacitors) that were not completed. As with the urban circuit patrol discussed above, these 27 inspections not completed in 2001 as planned are attributable to data conversion and reporting issues arising from the implementation of SCE's new work management system for inspection and maintenance data. SCE will complete the balance of the 20 underground and 7 pad mounted detail inspections within 90 days from the date of this Annual Report.

In the 2000 Annual Report, SCE had planned a number of detailed inspections of pad mounted capacitors to be completed in 2001 that were not required to be completed in 2001, as part of the same prescheduled inspection

program mentioned above in order to levelize future inspection activities. In 2001, SCE did complete all planned pad mounted capacitor detail inspections that were *required* for 2001, but did not complete all of the planned pad mounted capacitor detail inspections that had been "prescheduled" under the levelized plan. Thus, the balance of 17 pad mounted capacitor detail inspections shown in this Annual Report consists of inspections not due until some time in 2002 and/or future years.

C. Condition Ratings

G.O. 165 requires SCE to rate the condition of specified equipment inspected (transformers, switches, regulators, capacitors and conductors). During 2001, SCE revised its condition rating numbering system to state that condition rated 1 equipment and structure repairs have the highest priority. The conversion between the rating system used for the 2000 Annual Report and the current rating system is reflected in the following table:

Table I
Comparison of Past and Current Condition Rating System

Pre-2001 Condition Rating	2001 (Current) Condition Rating
6	1
5	2
4	3
3	4
2	5
1	n/a[5]

Under this revised condition rating system, condition rated 1 equipment and structure repairs begin immediately. SCE plans ahead for condition rated 2, 3 & 4 repairs. Condition rating 5 is used for all equipment whose condition either does not require any repair or does not require any scheduled repair. To the extent condition rated 5 equipment needs repair, those repairs are completed on equipment and structures in conjunction with planned ahead work for condition rated 2, 3, and 4 repairs. Therefore, they are not specifically reported within this Annual Report. SCE's 2001 inspections resulted in findings of 3,725 facilities with Level 2 condition ratings, 11,420 facilities with Level 3 condition ratings and 45,971 facilities with Level 4 condition ratings. The remaining 2,160,602 facilities were rated at Level 5.

---

[5] Pre-2001 Condition Rating 1 was reserved for information purposes and not specifically related to equipment or structure repairs. Since this activity was not actually associated with G.O. 165 condition-rating, the category was dropped in 2001.

D. 2001 Planned Corrective Actions

In the 2000 Annual Report, SCE outlined our plan to complete corrective actions on 2,378 facilities with Level 3 (former Level 4) condition ratings, and on 3,242 facilities with Level 2 (former Level 5) condition ratings, for a total of 5,620 planned corrective actions during 2001. The new reporting scheme within the 2001 Annual Report provides more detail to the CPUC with respect to SCE's pending maintenance corrective actions. SCE completed corrective actions on 6,565 facilities with Level 2 condition ratings, 5,265 facilities with Level 3 condition ratings and on 1,517 facilities with Level 4 condition ratings, for a total of 13,347 completed corrective actions in 2001. SCE completed 7,727 more corrective actions (237%) than planned.

These totals include (a) corrective actions due for completion in 2000 but reported in the 2000 Annual Report as uncompleted and scheduled for completion in 2001 (see Section III.D of SCE's 2000 Annual Report filed July 1, 2001[6]), (b) corrective actions planned for completion in 2001 based on prior years' inspections, (c) corrective actions that were identified during inspections conducted in 2001 and due for completion in 2001, (d) corrective actions that were identified during inspections conducted in 2001 that were due for completion in subsequent years and were completed ahead of schedule, and (e) corrective actions that were in the pending maintenance log of previous findings and due for completion in subsequent years which were actually completed ahead of schedule.

While the total number of corrective actions completed by SCE in 2001 exceeds the plan in aggregate, SCE did not complete all of the scheduled

---

[6] All of the outstanding 2000 corrective actions reported in the 2000 Annual Report as being incomplete as of that reporting date (7/1/01) have now been completed.

corrective actions. As reflected in the table below, there is a balance of 385 planned corrective actions that were not completed in 2001. SCE plans to complete the balance of 2001 planned corrective actions by year-end. In addition, SCE plans to complete 16,629 corrective actions due in 2002, for a total of 17,014 corrective actions, which is 303% or 3 times the number of corrective actions planned in 2001. The increase in corrective actions is directly related to the inspection findings from the detailed inspection program.

Table II
Corrective Actions

IV.

DISTRICT BOUNDARY REALIGNMENT DURING 2001

During the first half of 2001, for operational reasons, SCE realigned the boundaries of our districts and now refers to them as work locations. Consequently, the data reported by work location in this Annual Report will

not correspond directly to the data reported by district in the 2000 Annual Report.

Respectfully submitted,

(1) SCE is required to patrol 93% (100% of urbans & 72% of rurals) of its circuits in 2002 (excluding street lights).
SCE is required to patrol 100% (100% of urbans & 100% of rurals) of its street lights in 2002.
(2) Corrective actions planned to be completed in 2002 based on items found through previous inspections.

VERIFICATION

I am Director of Central Program Management for the Transmission and Distribution Business Unit of Southern California Edison Company, and am authorized to make this verification on its behalf. I am informed and believe that the matters stated in the foregoing document are true.

I declare under penalty of perjury that the foregoing is true and correct.

Executed this 28 th day of June, 2002, at Santa Ana, California.

David Mead
Director of Central Program Management
SOUTHERN CALIFORNIA EDISON COMPANY

2244 Walnut Grove Avenue
Post Office Box 800
Rosemead, California 91770

CERTIFICATE OF SERVICE

I hereby certify that, pursuant to the Commission's Rules of Practice and Procedure, I have this day served a true copy of **SOUTHERN CALIFORNIA EDISON COMPANY'S (U 338-E) ANNUAL REPORT OF 2001 ACTIVITIES FILED PURSUANT TO GENERAL ORDER NO. 165** on all parties identified on the attached service list. Service was effected by one or more means indicated below:

- ☑ Placing the copies in properly addressed sealed envelopes and depositing such envelopes in the United States mail with first-class postage prepaid (Via First Class Mail);
- ☐ Placing the copies in sealed envelopes and causing such envelopes to be delivered by hand to the offices of each addressee (Via Courier);
- ☐ Transmitting the copies via facsimile, modem, or other electronic means (Via Electronic Means).

Executed this **1st day of July, 2002**, at Rosemead, California.
