Table B.3.1-1. Visual Sensitivity-Visual Change Guidance for Review of Impact Significance

	Overall Visual Change				
OVERALL VISUAL SENSITIVITY	Low	Low-to-Moderate	Moderate	Moderate-to- High	High
Low	Not Significant <sup>1</sup>	Not Significant	Adverse but Less Than Significant	Adverse but Less Than Significant	Adverse but Less Than Significant
Low-to-Moderate	Not Significant	Adverse but Less Than Significant	Adverse but Less Than Significant	Adverse but Less Than Significant	Adverse and Potentially Significant
Moderate	Adverse but Less Than Significant <sup>2</sup>	Adverse but Less Than Significant	Adverse but Less Than Significant	Adverse and Potentially Significant	Adverse and Potentially Significant
Moderate-to-High	Adverse but Less Than Significant	Adverse but Less Than Significant	Adverse and Potentially Significant	Adverse and Potentially Significant	Significant <sup>4</sup>
High	Adverse but Less Than Significant	Adverse and Potentially Significant <sup>3</sup>	Adverse and Potentially Significant	Significant <sup>4</sup>	Significant

<sup>1</sup> **Not Significant** Impacts may or may not be perceptible but are considered minor in the context of existing landscape characteristics and view opportunity.

<sup>2</sup> Adverse but Less Than Significant Impacts are perceived as negative but do not exceed environmental thresholds.

<sup>3</sup> Adverse and Potentially Significant Impacts are perceived as negative and may exceed environmental thresholds depending on project and site-specific circumstances.

Significant Impacts with feasible mitigation may be reduced to levels that are less than significant or avoided all together. Without mitigation, significant impacts would exceed environmental thresholds.
