Question 01.c:

DR#2 Q.7

**Alternatives: Reduced Substation Alternative (Two 1200-MVA 500/230-kV Transformer Banks)**

CPUC is evaluating an alternative that would involve construction of the Mesa Substation as proposed but with only two 1200 MVA 500/220-kV transformer banks. Provide the following information about a reduced substation alternative that would consist of two 1200 MVA 500/220-kV transformer banks:

C. If SCE concurs in (A), provide a schematic that shows the substation layout for this alternative.

**Response to Question 01.c:**

Because the responses provided in Questions 1.a and 1.b indicated that SCE does not concur with potential alternative, there is no need to provide a substation layout schematic for this alternative.
