

Michael Clayton & Associates

The **existing view** to the southwest along Live Oak Canyon Road and existing roadside utility poles that would be used to hang a portion of the aboveground fiber optic line needed for the Proposed Project. This viewpoint was selected because the landscape is predominantly natural in appearance and contains a limited amount of utility infrastructure and built features, and the pole partially skyline. In more urban environments, the landscape would be more structurally complex and the new fiber optic line would be even less noticeable than from Live Oak Canyon Road.
