

Michael Clayton & Associates

The **existing view** to the northwest toward the existing transmission line corridor and the location of the eastern pair of transmission structures for the Partial Underground Alternative. This viewpoint was selected because it illustrates the visibility of the transition structures to local residents east of the Sun Lakes community. It would be the northbound views on South Highland Home Road that would be primarily effected. The existing wood pole H-frame structures are prominent features in the landscape, made more so by the skylining that occurs.
