

A **visual simulation** of a portion of the proposed aboveground fiber optic line, from Key Viewpoint 10 in southbound Live Oak Canyon Road. This view is to the southwest along an existing utility line. As shown in the simulation, the proposed fiber optic line would be suspended from the existing wood poles adjacent to the roadway. Although the new cable would be clearly visible, it would not be particularly noticeable in the context of the existing wires and cables, even though the surrounding landscape is prominently natural in appearance.
