

Michael Clayton & Associates

A **visual simulation** of the Route Alternative Option 3 from Key Viewpoint 11 on westbound Summit Drive, just east of North Alessandro Street. This view to the west presents a simulation of the replacement of the existing wood pole distribution line along the south side of the street with the new steel pole 115 kV subtransmission line with a distribution underbuild. The new structures would be more visually prominent with increased structure skylining and would add industrial character to the predominantly suburban residential landscape.
