

Michael Clayton & Associates

The **existing view** to the southeast toward Route Alternative Option 3 span of San Timoteo Canyon Road from Key Viewpoint 13 on eastbound San Timoteo Canyon Road, just west of the span. The Route Alternative Option 3 would be located to the east and south of the existing Devers-San Bernardino #2 220 kV transmission line (lattice steel structures) as it exits El Casco Substation (out of view to the south of San Timoteo Canyon Road). This view captures the considerable structural complexity and industrial character associated with the existing transmission corridor.
