

A **visual simulation** of the Route Alternative Option 3 from Key Viewpoint 13 on eastbound San Timoteo Canyon Road, just west of the potential crossing of San Timoteo Canyon Road. This simulation shows the introduction of the new steel poles of the 115 kV subtransmission line adjacent and to the east and south of the Devers-San Bernardino #2 220 kV transmission line. This view is to the southeast and also illustrates the prominence of the existing transmission infrastructure visible from San Timoteo Canyon Road.
