A **visual simulation** of the BCD South Option Revision span of I-8, from Key Viewpoint 88 on westbound I-8 just east of the La Posta Road overpass. This view to the northwest captures the route option's convergence on I-8 from the north. The simulation presented above illustrates the lattice structure closest to the freeway painted in an olive drab color. The next tower to the north is shown in a dark gray galvanized color per USFS requirements and Mitigation Measure V-45a. Structure pads and access roads would not be visible from this key viewpoint location.
