

Michael Clayton & Associates

A **visual simulation** of the Proposed Project from Key Viewpoint 9 at Station 6 on the Cactus Loop Trail out of Tamarisk Grove Campground. This view is to the south toward Tamarisk Grove Campground and proposed structure SP92. The new H-frame structure would appear as a prominent feature in the landscape as the transmission line passes to the immediate south of the Campground. As shown in the simulation, the existing wood pole structures would be relocated underground at this location.
