

Michael Clayton & Associates

A **visual simulation** of the Boulevard Substation replacement. This view is from Key Viewpoint 82 on westbound Old Highway 80, approximately 0.2 mile east of the intersection with Tule Jim Lane. This view to the southwest captures the proposed substation and the 69 kV transmission line tower that would be visible to travelers on Old Highway 80 and nearby residents. This simulation is conceptual due to the lack of available design information but does impart a reasonable representation of the scale and complexity of the anticipated substation replacement.
