

Michael Clayton & Associates

The **existing view** to the south-southeast from Key Viewpoint 84 on the southeast shoulder of Table Mountain, north of Interstate 8, which is discernible as a horizontal, linear feature in the center of the photograph. This view encompasses a portion of the northern end of the Sierra de Juárez Mountains where the Sempra La Rumorosa Wind Development Project would be located. The Jacumba Substation would be located on the valley floor just south of I-8. The gray lattice structures of the existing SWPL transmission line are barely noticeable just south of I-8.
