

This image presents a **Visual Simulation** of the Proposed Project from **KOP 1** at the **Segment 1 ROW crossing of Mission Road**, in the City of Loma Linda. The simulation illustrates the replacement of the existing facilities within this segment with two, taller double-circuit transmission lines with identical lattice structure designs. The result is a less structurally complex though slightly more prominent Project presence. There is also less view blockage of the background hills with removal of the subtransmission line.
