

This image presents a **Visual Simulation** of the Proposed Project with **FAA Hazard Marker Balls** added, as viewed from **KOP 2** on **Canyon Vista Drive**. This simulation illustrates the addition of several marker balls to each affected span based on a preliminary determination by SCE of the spans that may need marker balls. A final determination of the spans requiring marker balls will be known once detailed engineering is complete, an application has been submitted to the FAA, and the FAA has made its determination.
