

This image presents a **Visual Simulation** of the Proposed Project from **KOP 9**, on **Cedar Hollow Road**, just west of Cherry Avenue, in the City of Beaumont. This simulation illustrates the replacement of three existing transmission lines of different design and size, with two transmission lines of greater height but identical design. As shown in the simulation, the new structures would exhibit similar structural prominence when viewed from the north, and the overall structural complexity of the ROW would be reduced.
