

This image presents a **Visual Simulation** of the Proposed Project from **KOP 5** at the intersection of **Boros Boulevard**, and **Venturi Avenue**, in the Tukwet Canyon residential development. This simulation illustrates the replacement of three existing transmission lines of different design and size, with two transmission lines of greater height but identical design. As shown in the simulation, the new structures would be more prominent due to their greater height, but the overall structural complexity of the ROW would be reduced.
