

CSI and the Project Cost Breakdown Sheet

March 13, 2009
Chuck Hornbrook
PG&E

How we use the Project Cost Breakdown Sheet

- PMRS exemption
- Input panel, inverter, BOS and total cost into Power Clerk (these are the only fields tracked)
- Use for analysis of program costs to incentive (data in PC)
- Data is not 100% the same for all solar contractors and costs data is not complete
 - Minimal STD by installer in some cases
 - Incomplete PCBS

Opportunities

- Permit costs are listed but not tracked
- Other mechanism to help develop a sustainable solar industry in California
- Decrease costs for solar contractors to put data in while balancing with the policy goals of the CSI program

CSI Applications: Received & Claims

Total Received: 13,400
Total ICFs Rcvd: 9,336
