\*This compares electricity costs for an average large commercial customer in the Peninsula Clean Energy/PG&E service area (San Mateo County) with an average monthly demand of 576 kW and an average monthly usage of 242,493 kilowatt-hours (kWh). This is based on a representative 12-month billing history for all customers on E-19S rate schedules for PG&E's and PCE's published rates as of May 2020.

\*\*Solar Choice is a limited program available only to eligible customers that elect PG&E as their electric service provider. For more information please refer to [pge.com/solarchoice](http://pge.com/solarchoice).

**Generation Rate** is the cost of creating electricity to power your business. The generation rate varies based on your energy provider and the resources included in your energy provider's generation supply.

**PG&E Delivery Rate** is a charge assessed by PG&E to deliver electricity to your business. The PG&E delivery rate depends on your electricity usage, but is charged equally to both Peninsula Clean Energy and PG&E customers.

**PG&E PCIA/FF** represents the Power Charge Indifference Adjustment (PCIA) and the Franchise Fee surcharge (FF). The PCIA is a charge to recover PG&E's above-market costs for generation resources acquired prior to a customer's switch to a third-party electric generation provider such as Peninsula Clean Energy. The PCIA also applies to PG&E customers that elect to take service under PG&E's optional Solar Choice program. PG&E acts as a collection agent for the Franchise Fee surcharge, which is levied by the California Public Utilities Commission on behalf of cities and counties in PG&E's service territory for all customers. The costs for resources included in the PCIA and FF surcharges are included in the generation rates for PG&E bundled service customers.
