Safety and Enforcement Division  
California Public Utilities Commission

Re: Frontier's Response to Audit of Frontier Communications' Ventura County Area

Dear Fadi Daye,

Frontier California Inc (U-1002-C) ("Frontier") hereby responds to the March 29, 2024 California Public Utilities Commission (Commission) report regarding the Ventura County Area communications infrastructure provider audit conducted March 11, 2024, to March 15, 2024.

## **II. Records Review – Violations List**

My staff observed the following violations during the records review portion of the audit:

**GO95, Rule 80, Maintenance Programs and Resolution of Potential Violations of General Order 95 and Safety Hazards §(A)(1),** states in part:

*Each company (including electric utilities and communications companies) is responsible for taking appropriate corrective action to remedy potential violations of GO 95 and Safety Hazards posed by its facilities.*

Frontier's records indicated that for the calendar year 2023, Frontier had completed 2 repair work orders after their scheduled completion dates. Additionally, at the time of the audit, there were 104 open repair work orders that were past their scheduled completion dates.

**Response:** Frontier's Ventura work order records assessment differs from the Commission Staff's findings.

Frontier's work order records submitted as file "Frontier Confidential Ventura Tickets.xls" to pre-audit data request question E. indicate that for the calendar year 2023, Frontier completed 27 repair work orders after their scheduled completion dates. Additionally, at the time of the audit, there were 86 open work orders past their scheduled completion dates. Frontier is prioritizing the 86 open tickets for completion within the next 60 days.

See attached file "Frontier Confidential Ventura Tickets.xls" tab Ventura GO95 Ticket. Yellow highlighted tickets represent the 27 repair work orders completed after the scheduled completion date. Workorders with "True" noted in the Actual Finish Date column (column Z) identify the 81 open GO95 work orders. See tab GO128 Tickets for the 5 open GO128 tickets.

### **III. Field Inspection – Violations List**

My staff observed the following violations during the field inspection:

**GO 95, Rule 56.2 Overhead Guys, Anchor Guys and Span Wires, Use**, states in part:

*Guys shall be attached to structures, as nearly as practicable, at the center of load. They shall be maintained taut and of such strength as to meet the safety factors of Rule 44.*

The down guy wire supporting Pole number 1278935E was not taut:

**Response:** Repair ticket issued. See attached "2024 Ventura Audit tickets.pdf"

**GO 95, Rule 35, Vegetation Management**, states in part:

*When a supply or communication company has actual knowledge, obtained either through normal operating practices or notification to the company, that its circuit energized at 750 volts or less shows strain or evidences abrasion from vegetation contact, the condition shall be corrected by reducing conductor tension, rearranging or replacing the conductor, pruning the vegetation, or placing mechanical protection on the conductor(s).*

A Frontier communication conductor attached to each of the following poles was strained by vegetation:

1436503E • 1444101E • 1444102E • 1444105E • 1444106E • 1444109E • 1444110E.

**Response:** Repair tickets issued. See attached "2024 Ventura Audit tickets.pdf"

**GO 95, Rule 34, Foreign Attachments**, states in part:

*Nothing in these rules shall be construed as permitting the unauthorized attachment, to supply, street light or communication poles or structures, of antennas, signs,*

*posters, banners, decorations, wires, lighting fixtures, guys, ropes and any other such equipment foreign to the purposes of overhead electric line construction.*

Pole number 1702809E supported an unauthorized “Resident parking Only” sign.

**Response:** Repair ticket issued. See attached “2024 Ventura Audit tickets.pdf”

**GO 95, Rule 31.1, Design Construction and Maintenance,** states in part:

*Electrical supply and communication systems shall be designed, constructed, and maintained for their intended use, regard being given to the conditions under which they are to be operated, to enable the furnishing of safe, proper, and adequate service.*

Missing or damaged pole tags were observed on each of the following poles:

- Pole X8690Y (this pole is adjacent to poles numbered 1081230E and 1081231E)
- Pole number illegible (this pole is adjacent to poles numbered X13822Y and 1364758E)

Facilities on the following poles required maintenance:

- Pole 1540728E: the fiber terminal is abandoned and dangling from one end.
- Pole 1436507E: the copper terminal box was open.
- Pole 4047163E: Frontier communication cables were not properly secured to the pole.

**Response:** Repair tickets issued. See attached “2024 Ventura Audit tickets.pdf”

**GO 95, Rule 56.4, Ground Wires,** states in part:

*That portion of the ground wires attached on the face or back of wood crossarms or on the surface of wood poles and structures shall be covered by a suitable protective covering (see Rule 22.8).*

The ground moulding attached to each of the following poles was damaged:

- 1365055E • 2019594E • 1436506E • 1444111E

**Response:** Repair tickets issued. See attached “2024 Ventura Audit tickets.pdf”

**GO 95, Rule 84.7, Climbing Space,** states:

*Climbing space shall be maintained on one side or quadrant of all poles or structures supporting communications conductors excepting at the level of the one pair of conductors attached to the pole below the lowest crossarm (Rules 84.4–C1c, 84.4–D1 and 87.4–C3) and the top 3 feet of poles carrying communication conductors only which are attached directly to pole in accordance with the provisions of Rule 84.4–C1c.*

The climbing space on Pole number 1436506E was obstructed by vegetation.

**Response:** Repair ticket issued. See attached "2024 Ventura Audit tickets.pdf"

**GO 95, Rule 31.6, Abandoned Lines**, states:

*Lines or portions of lines permanently abandoned shall be removed by their owners so that such lines shall not become a public nuisance or a hazard to life or property. For the purposes of this rule, lines that are permanently abandoned shall be defined as those lines that are determined by their owner to have no foreseeable future use.*

Abandoned service drops were observed on or near the following poles:

- 1096103E • 1709724E • 799128E • 1436503E • 1436504E • 1436505E • 1540728E • 1500710E • T1374Y

**Response:** Repair tickets issued. See attached "2024 Ventura Audit tickets.pdf"

**GO 95, Rule 38 - Minimum Clearances of Wires from Other Wires, Table 2, Column C, Case 8**, requires the minimum vertical clearance of "Communication Conductors (Including Open Wire, Cables and Service Drops)," and "Communication Conductors and Supply Drops" supported on the same pole to be 12 inches.

Frontier communications conductors were touching third-party communications conductors on or near each of the following poles:

- 2241509E • 376665E • 1444101E • T3617 • 1444108E

**Response:** Repair ticket issued. See attached "2024 Ventura Audit tickets.pdf"

**GO 128, Rule 17.1, Design, Construction and Maintenance**, states in part:

*For all particulars not specified in these rules, design, construction, and maintenance should be done in accordance with accepted good practice for the given local conditions known at the time by those responsible for the design, construction, or maintenance of [the] communication or supply lines and equipment.*

The cover of the pedestal at 209 Lupe Avenue was damaged .

**Response:** Repair ticket issued. See attached "2024 Ventura Audit tickets.pdf"

**GO 128, Rule 42.7, Covers**, states in part:

*Manholes and handholes, while not being worked in shall be securely closed by covers of sufficient strength to sustain such loads as may reasonably be imposed*

*upon them, and arrangement shall be such that a tool or appliance shall be required for their opening and cover removal.*

Covers on the following manholes and handholes were not secure:

- The cover to the “Hand-hole” at 709 Via Alondra was unsecured and rusty.
- The cover to the “Hand-hole” at 829 Via Alondra was broken and rusty.
- The cover to the “Pedestal” at 291 Hiram Ave. was missing.
- The cover to the “Pedestal” at 242 Hiram Ave. was not secure

**Response:** Repair tickets issued. See attached “2024 Ventura Audit tickets.pdf”

If you have any questions, please do not hesitate to contact me at 214-724-7719, or [judy.geise@ftr.com](mailto:judy.geise@ftr.com).

Sincerely,  
/s/ Judy Geise  
Manager, Compliance

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers. Once a need is identified, the next step is to develop a concept that addresses this need. This concept should be unique and offer a clear value proposition to the target market.

2. After developing a concept, the next step is to create a prototype. A prototype is a preliminary model of the product that allows the development team to test and refine their ideas. This can be done through various methods, such as 3D printing, computer-aided design (CAD), or even hand-drawn sketches. The prototype is used to gather feedback from potential users and make necessary adjustments to the design.

3. Once a prototype is created, the next step is to conduct a feasibility study. This study evaluates the technical, financial, and market viability of the product. It involves assessing the resources required for production, the potential costs, and the competitive landscape. The feasibility study helps the development team make informed decisions about whether to proceed with the product and what resources will be needed.

4. The next step in the process is to develop a business plan. A business plan is a document that outlines the company's goals, strategies, and financial projections. It serves as a roadmap for the business and is essential for securing funding from investors or lenders. The business plan should include details about the market, the product, the marketing strategy, and the financial requirements.

5. After developing a business plan, the next step is to secure funding. This can be done through various channels, such as venture capital, angel investors, or crowdfunding. Each channel has its own requirements and processes, so it's important to research and choose the right one for the business. Once funding is secured, the next step is to start production.

6. The final step in the process is to launch the product. This involves creating a marketing campaign to generate awareness and interest in the product. The marketing campaign should include a mix of online and offline activities, such as social media, email marketing, and public relations. Once the product is launched, the company should continue to monitor market feedback and make necessary adjustments to the product and marketing strategy.

1. The first step in the process of creating a business plan is to conduct a thorough market research. This involves identifying the target market, understanding the needs and preferences of the customers, and analyzing the competitive landscape. Market research can be conducted through various methods, including surveys, interviews, and focus groups. The goal is to gather valuable insights that will inform the business strategy and help in making informed decisions.

2. Once the market research is complete, the next step is to define the business goals and objectives. These should be clear, measurable, and achievable. The goals should outline the long-term vision of the business, while the objectives should focus on the short-term targets. This step is crucial as it provides a clear direction and purpose for the business plan.

3. The third step is to develop a marketing strategy. This involves identifying the most effective ways to reach the target market and promote the business. The marketing strategy should include details about the advertising channels, promotional activities, and the overall messaging. It should also consider the budget and the timeline for the marketing efforts.

4. The fourth step is to create a financial plan. This involves estimating the costs of the business and projecting the revenue. The financial plan should include a detailed budget, a cash flow statement, and a break-even analysis. It should also consider the funding requirements and the potential risks to the business.

5. The final step is to write the business plan. This involves putting all the information gathered in the previous steps into a coherent and professional document. The business plan should be well-structured, easy to read, and persuasive. It should clearly communicate the business vision, the market research findings, the marketing strategy, and the financial projections. The business plan is a crucial tool for securing funding and guiding the business operations.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers are looking for and what problems they are trying to solve. Once a need is identified, the next step is to develop a concept for a product that addresses that need. This is often done through brainstorming sessions with a team of designers and engineers. The concept is then refined through prototyping and testing, with feedback from potential users being used to make improvements. Once the product is ready for production, the next step is to create a marketing plan that outlines how the product will be promoted and sold. This includes identifying target markets, developing a sales strategy, and creating promotional materials. The final step in the process is to launch the product and monitor its performance in the market. This involves tracking sales, gathering customer feedback, and making adjustments as needed to ensure the product is successful.

This image is a completely blank white page with no visible content, text, or markings.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. For example, a manager might notice that sales are declining or that customer satisfaction is low. Once a problem is identified, the next step is to define it more precisely. This involves determining the scope of the problem, its causes, and its effects. For instance, a manager might define a problem as "a 10% decline in sales over the last quarter, primarily due to a loss of market share in the competitive market." This definition helps to focus the problem and provides a clear starting point for further investigation.

2. The second step in the process is to gather information about the problem. This involves collecting data and facts that are relevant to the problem. For example, a manager might gather data on sales trends, customer feedback, and market conditions. This information is then used to identify the causes of the problem. For instance, a manager might discover that the decline in sales is due to a combination of factors, including increased competition, changes in customer preferences, and a lack of effective marketing strategies. This step is crucial because it provides the manager with the information needed to make informed decisions about how to address the problem.

3. The third step in the process is to analyze the information gathered in the previous step. This involves identifying the key factors that are contributing to the problem and determining their relative importance. For example, a manager might analyze the data and find that the primary cause of the decline in sales is a loss of market share. This analysis helps to narrow down the problem and identify the specific areas that need to be addressed. For instance, a manager might determine that the loss of market share is due to a lack of effective marketing strategies, which is the primary area that needs to be addressed.

4. The fourth step in the process is to develop a plan of action to address the problem. This involves identifying the specific steps that need to be taken to solve the problem. For example, a manager might develop a plan that includes increasing the marketing budget, hiring additional sales staff, and implementing new marketing strategies. This plan is then used to guide the implementation of the solution. For instance, a manager might implement the plan by increasing the marketing budget, hiring additional sales staff, and implementing new marketing strategies. This step is crucial because it provides the manager with a clear roadmap for how to address the problem.

5. The fifth and final step in the process is to implement the plan of action and monitor the results. This involves putting the plan into action and tracking the progress of the solution. For example, a manager might implement the plan by increasing the marketing budget, hiring additional sales staff, and implementing new marketing strategies. The manager then monitors the results to determine if the plan is effective. For instance, a manager might monitor the results by tracking sales trends, customer feedback, and market conditions. If the plan is effective, the manager will see an improvement in sales and customer satisfaction. If the plan is not effective, the manager will need to revise the plan and try a different approach.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves observing the current situation and comparing it to the desired state. For example, if a company's sales are declining, the first step would be to recognize that there is a problem with sales performance.

2. The second step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed. For example, if sales are declining, the problem might be defined as a decrease in the number of customers or a decrease in the value of sales.

3. The third step is to analyze the problem. This involves identifying the causes of the problem and determining the scope of the problem. For example, if sales are declining, the analysis might involve identifying the factors that are contributing to the decline, such as changes in the market or changes in the company's products or services.

4. The fourth step is to develop a solution. This involves identifying the actions that need to be taken to address the problem. For example, if sales are declining, the solution might involve developing a new marketing strategy or improving the quality of the company's products or services.

5. The fifth step is to implement the solution. This involves putting the solution into action and monitoring the results. For example, if the solution involves developing a new marketing strategy, the implementation might involve creating a marketing plan and executing it.

6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the solution and determining whether the problem has been resolved. For example, if the solution involves developing a new marketing strategy, the evaluation might involve tracking sales performance over time to see if it has improved.

7. The seventh step is to document the process. This involves recording the steps that were taken to identify the problem, develop a solution, and implement the solution. This documentation can be used to inform future problem-solving efforts and to provide a record of the company's problem-solving process.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers. Once a need is identified, the next step is to develop a concept that addresses this need. This concept should be unique and offer a clear benefit to the target market.

2. After developing a concept, the next step is to create a prototype. A prototype is a preliminary model of the product that allows the development team to test and refine their ideas. This can be done through various methods, including 3D printing, computer-aided design (CAD), or even hand-drawn sketches. The prototype is used to gather feedback from potential users and make necessary adjustments.

3. Once a prototype is developed, the next step is to conduct a feasibility study. This study evaluates the technical, financial, and market viability of the product. It involves assessing the resources required for production, the potential costs, and the likelihood of the product being accepted by the market. This step is crucial for determining whether the product is worth pursuing further.

4. If the feasibility study is positive, the next step is to develop a business plan. A business plan outlines the strategy for launching and marketing the product. It includes details about the target market, distribution channels, pricing strategy, and financial projections. This plan serves as a roadmap for the development and launch of the product.

5. The final step in the process is to launch the product. This involves manufacturing the product, setting up distribution channels, and implementing a marketing campaign to promote the product to the target market. Once launched, the product should be monitored closely to gather feedback and make any necessary adjustments to improve its performance and market acceptance.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This involves observing the current situation and comparing it to the desired state. For example, if a company's sales are declining, the first step would be to recognize that there is a problem with sales performance.

2. The second step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed. For example, if sales are declining, the problem might be defined as a decrease in the number of new customers acquired.

3. The third step is to analyze the problem. This involves identifying the causes of the problem and determining the scope of the problem. For example, if sales are declining, the analysis might involve identifying the factors that are contributing to the decline, such as changes in the market or competition.

4. The fourth step is to develop a solution. This involves identifying the actions that need to be taken to address the problem. For example, if sales are declining, the solution might involve developing a new marketing strategy to attract more customers.

5. The fifth step is to implement the solution. This involves putting the solution into action and monitoring the results. For example, if a new marketing strategy is developed, the next step would be to implement the strategy and track the resulting sales performance.

6. The sixth step is to evaluate the results. This involves comparing the actual results to the desired state and determining whether the problem has been solved. For example, if the new marketing strategy is implemented, the next step would be to evaluate the resulting sales performance and determine if it has improved.

7. The seventh step is to communicate the results. This involves sharing the results of the problem-solving process with the relevant stakeholders. For example, if the sales performance has improved, the results should be communicated to the sales team and management.

8. The eighth step is to document the process. This involves recording the steps taken to solve the problem and the results achieved. This documentation can be used as a reference for future problem-solving efforts.

9. The ninth step is to review the process. This involves reflecting on the problem-solving process and identifying areas for improvement. For example, if the process was successful, the steps taken could be used as a model for future problem-solving efforts.

10. The tenth step is to celebrate the success. This involves acknowledging the team's efforts and the successful outcome of the problem-solving process. This can help to boost morale and encourage future problem-solving efforts.

1. The first step in the process of creating a business plan is to conduct a thorough market research. This involves identifying the target market, understanding the needs and preferences of the customers, and analyzing the competitive landscape. Market research can be conducted through various methods, including surveys, interviews, and focus groups. The goal is to gather valuable insights that will inform the business strategy and help in making informed decisions.

2. Once the market research is complete, the next step is to define the business goals and objectives. These should be clear, measurable, and achievable. The goals should outline the long-term vision of the business, while the objectives should focus on the short-term targets. It is important to have a clear understanding of what the business aims to achieve and how it plans to reach those goals.

3. The third step is to develop a marketing strategy. This involves identifying the most effective ways to reach the target market and promote the business. The marketing strategy should take into account the budget, the competitive landscape, and the unique selling proposition of the business. It should outline the key marketing channels, such as social media, email marketing, and traditional advertising, and specify the tactics to be used.

4. The fourth step is to create a financial plan. This involves estimating the costs of the business and projecting the revenue. The financial plan should include a detailed budget, a cash flow statement, and a break-even analysis. It should also consider the funding requirements and the potential risks to the business. The financial plan is crucial for determining the viability of the business and for securing financing from investors or lenders.

5. The final step is to write the business plan. This is a comprehensive document that outlines the business strategy, the marketing plan, the financial plan, and the management team. It should be written in a clear and concise manner, using simple language and avoiding jargon. The business plan should be a living document that can be updated as the business evolves and new opportunities arise.
