Border Fire

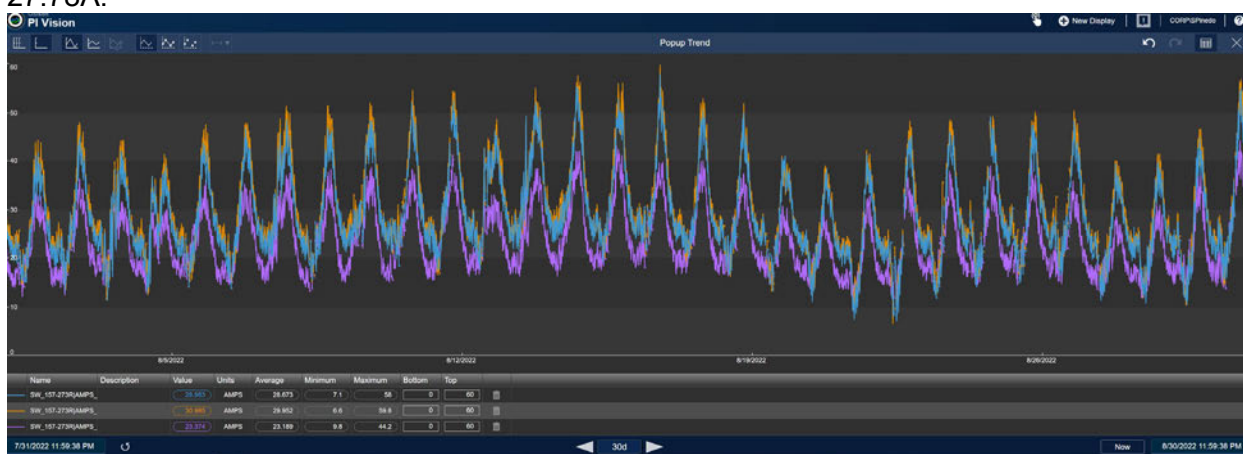

2018 CMP Manual
Final 9-04-2018.pdf

- 14) In the Affected Section of the Subject Circuit, what is the amp range under normal operating conditions?

SDG&E Response

According to our mapping the nearest upstream SCADA device from the affected area is SWI 157-273R. If you look at the load trend for 157-273R for the month of August 2022(excluding 8/31) we find that the minimum load per phase during that time frame was 6.6A and the max was 59.8A. The average load per phase over the same time frame was 27.78A.

- 15) At any point after the start of the fire, did CAL FIRE request any assistance of SDG&E regarding any portion of the Subject Circuit? If yes, please describe what assistance was sought in detail, including the date and time it was requested.

SDG&E Response

SDG&E provides a single point of contact for any needs of the incident and to coordinate access and restoration activities.

- 16) Please provide the total dollar amount that SDG&E has paid and/or estimates that it will pay for the following:
- Damages to utility property; and
 - Third-party claims for property damage. If this information is not yet available, please indicate approximately when it will be available, and provide it when it becomes available.

SDG&E Response

- a. Costs associated with damage to utility property is currently estimated at \$154,306.96.
- b. One claim was filed for food loss. \$0.00 was paid.

Sincerely,

[REDACTED]

INVESTIGATION REPORT

CASE NUMBER:	22CAMVU018864
CASE NAME:	Border 32
DATE:	August 31, 2022
INCIDENT TYPE:	Wildland Fire
INCIDENT INVESTIGATORS:	Matthew BROWN, Fire Captain-Specialist -MVU Robert JOHNSON, Fire Captain-Specialist -MVU

1 - VIOLATION:

Health & Safety Code § 13001

Every person is guilty of a misdemeanor who, through careless or negligent action, throws or places any lighted cigarette, cigar, ashes, or other flaming or glowing substance, or any substance or thing which may cause a fire, in any place where it may directly or indirectly start a fire, or who uses or operates a welding torch, tar pot or any other device which may cause a fire, who does not clear the inflammable material surrounding the operation or take such other reasonable precautions necessary to insure against the starting and spreading of fire.

California Public Resources Code § 4435

If any fire originates from the operation or use of any engine, machine, barbecue, incinerator, railroad rolling stock, chimney, or any other device which may kindle a fire, the occurrence of the fire is prima facie evidence of negligence in the maintenance, operation, or use of such engine, machine, barbecue, incinerator, railroad rolling stock, chimney, or other device. If such fire escapes from the place where it originated and it can be determined which person's negligence caused such fire, such person is guilty of a misdemeanor.

2 - SUMMARY:

On Wednesday, August 31, 2022, at approximately 2:14 PM, the San Diego Interagency Communications Center dispatched a vegetation fire in the rural community of Barrett Junction, located in the county of San Diego. The fire caused damage to approximately 8 structures, destroyed 30 structures, and consumed 4,456 acres of vegetation. Civilians and firefighters sustained injuries as a result of the fire.

CDL: PII

Can testify to witnessing the Border 32 Fire when it was small.

5 - EVIDENCE:

Physical evidence was collected at the scene by BROWN.

Item E-1: Blued metal shavings found within the SOA if the Border 32 Fire.

Item E-2: Damaged chunk of metal found on the side of the roadway near the SOA.

Item E-3: Metal cotter pin found near the SOA on the side of the highway.

Photographic evidence was taken by BROWN.

Photographs P-MB-001 thru P-MB-080 were taken on August 31, 2022 and September 1, 2022 (*see attachment #5*).

Witness photographs were taken by independent witnesses on August 31, 2022.

6 – CONDITIONS:

Weather for the Border 32 Fire was recorded from a Remote Automated Weather Station (RAWS) located in Barrett, CA, approximately 3 miles from the origin.

Barrett RAWS data.

Date: August 31, 2022

Time: 2:00 PM

Wind: 15 miles per hour, gusts to 22 miles per hour

Wind Direction: West

Temperature: 102 degrees Fahrenheit

Fuel Temperature: 123 degrees Fahrenheit

Relative Humidity: 19 Percent

8 - PROPERTY:

The Border 32 Fire started along the westbound shoulder on State Highway 94 in the rural community of Barrett Junction, CA. The fire was located on State Responsibility Land (SRA) and consisted of tall annual grass and medium brush. The fire ultimately burned approximately 4,456 acres of private and forestland.

9 - NARRATIVE:

On Wednesday, August 31, 2022, at approximately 2:17 PM, the San Diego Interagency Communications Center (SDICC) dispatched a vegetation fire near State Highway 94 and Barrett Lake Road in the rural community of Barrett Junction, CA located in the county of San Diego.

I responded to the fire with Fire Captain Specialist Robert JOHNSON wearing full law enforcement uniform in my department issued law enforcement vehicle equipped with emergency lights and siren. I arrived at scene at approximately 3:29 PM and observed the fire to be approximately 30-40 acres in size, and burning in an east direction.

JOHNSON and I observed the area along Highway 94 near Barrett Smith Road and noticed what appeared to be freshly constructed hand crew line and an abandoned hose lay near the western portion of the heel of the main fire. JOHNSON and I began looking at overall macro indicators within the area along the east side of Highway 94 between Barrett Smith Road and the bridge that crossed over Potrero Creek.

JOHNSON and I began our origin and cause investigation by conducting an investigative walk of the perimeter of the fire's edge in a clockwise direction. JOHNSON and I observed several macro indicators within the area. We continued our investigative walk until we connected with Highway 94 at the bridge. From that point we turned and conducted our investigative walk in a counterclockwise direction viewing the area from a different direction. As we concluded our investigative walk at our original starting point, we relocated our vehicles to a safe location due to increased fire activity. During our investigative walk, JOHNSON and I determined an area approximately ½ acre in size to be the General Origin Area (GOA). While fire suppression crews were mitigating the fire, JOHNSON spoke with United States Border Patrol Agents (USBP) on scene to inquire if any subjects were apprehended near the fire. USBP agents told JOHNSON they would advise him if there were any reports.

When fire suppression crews were able to gain control of the fire near the GOA, JOHNSON and I continued our investigation. JOHNSON and I entered the GOA toward the head of the advancing fire and began working in an "S-pattern" looking at macro indicators. We began placing indicator flags as a visual reference. Red flags indicating advancing indicators, yellow flags indicating lateral indicators, blue flags indicating

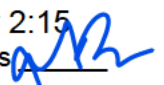

1 backing indicators, and green flags indicating items of interest. JOHNSON and I
2 continued working in an "S-pattern" identifying macro indicators until we reached a
3 transition zone. At that point we would continue working our way toward the less
4 involved area of the GOA. Our fire pattern indicators lead us to a dirt bank leading up to
5 Highway 94 approximately 30' up an embankment. JOHNSON and I exited the GOA
6 along the east shoulder of highway 94 and observed the overall area with indicator flags
7 placed. JOHNSON and I observed a very obvious "V-pattern" leading from a large bush
8 near the shoulder of Highway 94. JOHNSON and I began walking along Highway 94
9 toward the bridge. From the bridge, JOHNSON and I began looking at indicators along
10 the roadside. We noticed several backing indicators leading toward the large bush we
11 identified approximately 100' west from the start of the metal guardrail on the bridge.
12 JOHNSON and I continued placing indicator flags along the roadway shoulder.
13 JOHNSON and I took a few steps back to look at the overall area with indicator flags in
14 place. We observed a remarkable change in indicators along the shoulder of the
15 roadway and the large bush and determined the area to be the Specific Origin Area
16 (SOA). The SOA was approximately 30'x30' in size.

17 At this point, the sun was beginning to set behind the hillsides and daylight was rapidly
18 deteriorating. A request was made through the SDICC for scene security and the
19 decision was made to begin taking photographs of identified indicators and the overall
20 scene. USBP agents contacted JOHNSON and told him a "load vehicle" was
21 apprehended in the area and the subjects were being held at a local holding facility.
22 JOHNSON decided to conduct interviews with the subjects and headed toward the
23 holding facility (*see JOHNSON's supplemental report for interviews*). I remained on
24 scene to conclude photographs and provide scene integrity until scene security arrived.
25 I flagged off the GOA with yellow caution tape along Highway 94 from the bridge to the
26 heel of the fire.

27 At approximately 9:59 PM, CAL FIRE Fire Captain Daniel TREIMAN arrived at scene to
28 provide scene security for the evening. I provided directions to TREIMAN to secure the
29 origin of the fire and deny access to anyone until JOHNSON and I returned the following
30 morning.

31 On Thursday, September 1, 2022, at approximately 8:00 AM, JOHNSON and I arrived
LE80 (Rev. 7/2011)

1 at the origin of the Border 32 Fire. TREIMAN told me no one entered the scene and he
2 maintained scene integrity throughout the night. TREIMAN departed the scene at
3 approximately 8:30 AM. The wind direction had changed to an east wind which
4 provided a favorable environment to continue the origin and cause investigation due to
5 no smoke and clear visibility. JOHNSON and I began working the SOA looking at
6 microscale indicators. We entered the SOA from the southeast edge of the roadway
7 working in an "S-pattern" toward the northwest. While working within the SOA,
8 JOHNSON and I identified approximately 7 small ignition areas which appeared to be
9 unassociated with the main fire. The separate ignition areas varied in diameter ranging
10 from 4"x4" to 12"x12" and were located directly west of the main SOA in close proximity.
11 JOHNSON and I thought the smaller ignition areas could possibly be associated with
12 the main fire but not probable. Given the weather and wind patterns during the time of
13 ignition, there was a strong sustained west wind influencing the main fire progression
14 toward the east. JOHNSON and I began focusing on each identified ignition area and
15 placed indicator flags. I utilized a clean magnet over each ignition area and recovered
16 fresh blued metal shavings. I photographed each finding and placed the recovered
17 metal shavings in an evidence collection box and stored for safe keeping (*see photos P-*
18 *MB-041 thru P-MB-050*). While working inside the SOA, JOHNSON observed a small
19 chunk of metal on the edge of the roadway approximately two feet from the SOA. The
20 metal chunk was approximately the size of a quarter and appeared similar to the metal
21 shavings recovered earlier. There was evidence of damage to the metal chunk, and it
22 appeared to be fresh with no signs of weathering or rust. I photographed the metal
23 chunk in place and collected as evidence (*see photographs P-MB-049 thru P-MB-050*).
24 On Saturday, August 3, 2022, at approximately 11:30 AM, I was notified by CAL FIRE
25 Fire Captain Daniel TWOHY, there were a few witnesses that took photographs of the
26 fire when it started. TWOHY provided me with the witness contact information and I
27 conducted phone interviews with each witness separately. The first witness I conducted
28 a phone interview with was identified as [REDACTED] PII I asked [REDACTED] PII to describe the
29 sequence of events that occurred the day of the Border 32 Fire. [REDACTED] PII told me the
30 following in summary. [REDACTED] PII departed work which was located in [REDACTED] PII and
31 was driving to his residence which was located in [REDACTED] PII At approximately 2:15
LE80 (Rev. 7/2011)

1 PM, he received a phone call from his neighbor, [PII] telling him there was a
2 fire located on Highway 94 near Barrett. A few minutes later, [PII] approached the fire
3 scene on his drive home. [PII] described the fire to be several hundred feet in size
4 and was starting to burn up the hillside toward the east, away from the road. [PII]
5 took a few photos of the fire as he drove past and continued on to his house. I asked
6 [PII] if the fire department was at scene when he was in the area of the fire and he
7 told me no. I asked [PII] if there were any people or vehicles pulled over near the fire
8 and he told me there were a few cars stopped near the fire and looked like they were
9 calling 9-1-1 and taking photos. [PII] told me he did not see anyone else near the fire
10 that looked suspicious. [PII] recommended I interview his neighbor [PII] because
11 he was near the fire when it started. [PII] provided me [PII] phone number and
12 told me he would let him know I would like to interview him.

13 On Saturday, August 3, 2022, at approximately 12:30 PM, I conducted a phone
14 interview with [PII] I asked [PII] to describe the sequence of events
15 leading up to the fire. [PII] told me the following in summary. [PII] and his wife
16 were traveling from their home in [PII] to a friend's house in [PII] for
17 a pool party when [PII] noticed a glimpse of gray smoke at the bottom of the grade.
18 [PII] told his wife he thinks he saw smoke and there might be a fire. [PII]
19 continued driving westbound on Highway 94 and came across building gray smoke and
20 flames at the end of the bridge. As they approached in their vehicle, [PII] noticed the
21 fire was on the side of the road and approximately "a few feet by a few feet" in size.

22 [PII] wife took photos of the fire as they passed then dialed 9-1-1 to report the fire.

23 [PII] pulled his vehicle over at Barrett Smith Road and began honking his horn to
24 alert the residents of the fire. [PII] exited the vehicle to see if he could assist with
25 extinguishment, but the fire had quickly grown and was beginning to burn toward the
26 hillside to the east. [PII] took a few more photos of the fires progression while
27 standing outside his vehicle. I asked [PII] if he observed and people or vehicles near
28 the fire when he approached and he told me there were no people and there was only
29 one pick-up truck with a "Davey's Landscaping" logo on the side at the intersection of
30 Highway 94 and Barrett Smith Road. [PII] said it looked like the driver was on the
31 phone attempting to report the fire. [PII] provided me with his information and sent

me the photos he took of the fire. This concluded my phone interview with [REDACTED] PII

Opinions and Conclusions

During my origin and cause investigation of the Border 32 Fire, there were no factors tending to show that lightning, debris burning, railroad, cutting/welding/grinding, and powerlines were the cause of the fire. Due to the location of the fire and close proximity to the highway I considered arson or incendiary as a possible cause of the fire, however after conducting witness interviews and investigating, it was later eliminated as a possible ignition source. After reviewing the fire pattern indicators and considering the several small ignition areas not associated with the main fire with sustained west winds influencing the main fire progression, based on my training and experience, I know fires tend to spot ahead of themselves and typically do not spot against the wind. After conducting my origin and cause investigation, observed the scene, recovered evidence, and interviews, I determined the Border 32 Fire was started by a vehicle traveling on Highway 94. The vehicle threw hot metal pieces into the dry grass, causing the grass to ignite. The fire quickly grew out of control and destroyed approximately 4,456 acres of forestland.

SDG&E equipment is not suspected as a cause of the fire and unaware of any failures to investigate per General Order 95, Rule 17.

- 43) Are any portions of the Affected Section of the Subject Circuit in High Fire Threat Districts (HFTD)? If so, provide the following:
- A map indicating the portion(s) of the Affected Section designated as HFTD, and the Tier; and
 - SDG&E procedures that specify the frequency of patrols and inspections for the HFTD Tier specified in part a.

SDG&E Response

43a) Entire Affected Section of the Subject Circuit is in Tier 3.

43b) The Corrective Maintenance Program (CMP) Manual specifies the frequency of patrols and inspections.

- 44) During a site visit on 9/14/2022, CPUC's investigator noticed a burned post adjacent to Pole # 175963. See photo below.
- Please provide details regarding the purpose of this post.
 - Why was the post located adjacent to Pole #175963?
 - What was the post used for?

SDG&E Response

The post is a customer's burnt fence post. Not an SDG&E facility.

- 45) Provide a privilege log containing a list and description of any documents not being submitted in response to this data request due to attorney-client and/or attorney work product privileges.

SDG&E Response

Old wood poles and cross arms were replaced in kind with equivalent steel poles and fiberglass cross arms. In some cases, a taller steel pole may have been installed for clearance purposes.

- 29) If the replacement equipment or facilities are different from those previously installed, please provide the following:
- a. A detailed explanation of why the replacement equipment or facilities are different from those previously installed; and
 - b. All associated documentation explaining why the design change was made.

SDG&E Response

Please see response to question 28.

- 30) Did the weather on 8/31/2022 meet any of the criteria for SDG&E to proactively de-energize any circuits for a Public Safety Power Shutoff (PSPS) event?
- a. If the weather on 8/31/2022 met any of the criteria for activation of a PSPS event, please indicate what criteria were met;
 - b. Please describe the process SDG&E followed on the above date for making the determination to activate, or not activate, a PSPS event on the Subject Circuit; and
 - c. Provide a copy of the utility procedures for determining when to activate a PSPS event on a circuit which were in effect as of the date of the incident.

SDG&E Response

30a) Weather conditions did not meet PSPS criteria.

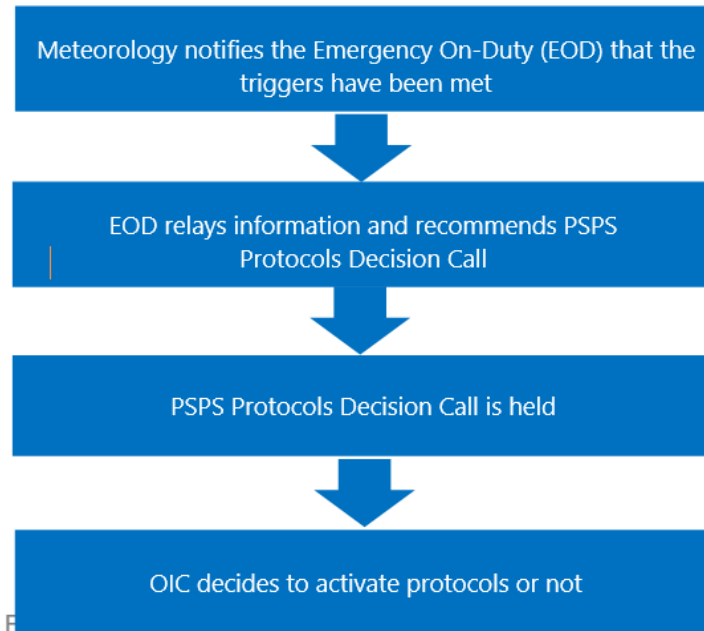

30b) SDG&E Meteorology forecasts indicated weather conditions on 8/31/2022 would include well above average temperatures and low humidity, resulting in an elevated potential for wildfire. However, winds were forecast to remain below thresholds used when considering PSPS activation.

30c) SDG&E Meteorology team will complete the PSPS Activation Trigger Form when Santa Ana winds are forecasted in official SDG&E Weather Briefings* responding yes or no to the following questions:

- Has the NWS provided any indication in their forecast discussion, forecast products or social media communications that a Red Flag Warning or critical fire weather conditions may be possible during the forecast period?
- Has the GACC in Riverside, CA provided any indication in their forecast discussion, forecast products or social media communications that a “high risk day” or any rating on the SAWTI may be issued?
- Does the SDG&E FPI show that a combination of the fuel dryness and Santa Ana winds may lead to the potential for large wildfire (FPI 14 or above)?
- Do initial wind speed forecasts generated by SDG&E meteorology models (WRF and IA forecasting) indicate a reasonable probability of reaching alert speeds for any of the SDG&E weather stations?

- Do the forecasted weather conditions warrant a convening of executive leadership to discuss the potential for PSPS Protocols?

Figure 1: PSPS Protocols activation process

31) What were the weather conditions at the time of the incident at the incident location?

SDG&E Response

Weather conditions included mostly clear skies and hot temperatures. The National Weather Service had issued an Excessive Heat Warning for the fire area that was in effect at the time of the ignition.

32) What were the ambient conditions (e.g. wind speed, dry-bulb temperature, relative humidity, etc.) as recorded by SDG&E's nearest weather station at the time of the incident?

SDG&E Response

The nearest SDG&E weather station, located approximately one mile southeast of the estimated ignition point, reported a temperature of 101.6 degrees Fahrenheit, relative humidity of 23%, and a sustained wind of 17.8 mph with gusts to 25.9 mph from the south-southwest at the time of the incident.

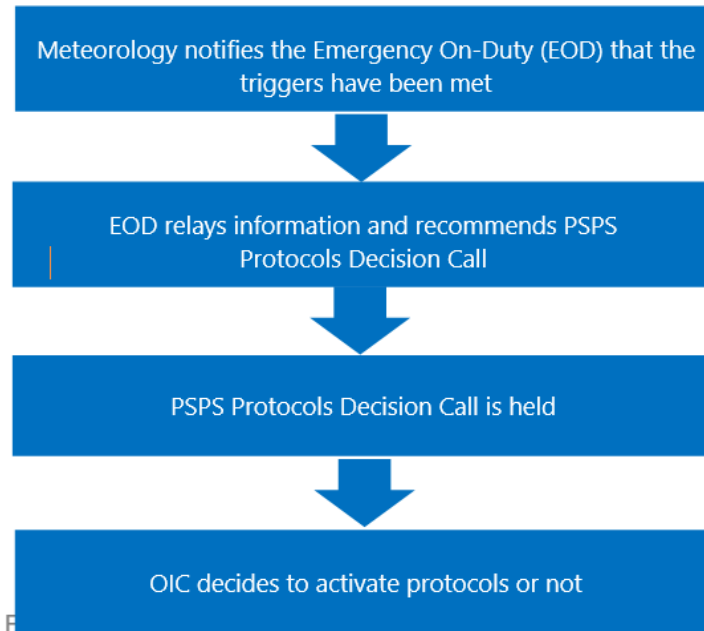

33) Please provide a map of all utility weather stations located in the fire area and state the distance from the closest weather station to the incident location.

SDG&E Response

See below map with Border 32 Fire perimeter in red and weather station locations indicated by blue icons and identification codes. The closest weather station was approximately one mile southeast of the ignition location.

- Do the forecasted weather conditions warrant a convening of executive leadership to discuss the potential for PSPS Protocols?

Figure 1: PSPS Protocols activation process

31) What were the weather conditions at the time of the incident at the incident location?

SDG&E Response

Weather conditions included mostly clear skies and hot temperatures. The National Weather Service had issued an Excessive Heat Warning for the fire area that was in effect at the time of the ignition.

32) What were the ambient conditions (e.g. wind speed, dry-bulb temperature, relative humidity, etc.) as recorded by SDG&E's nearest weather station at the time of the incident?

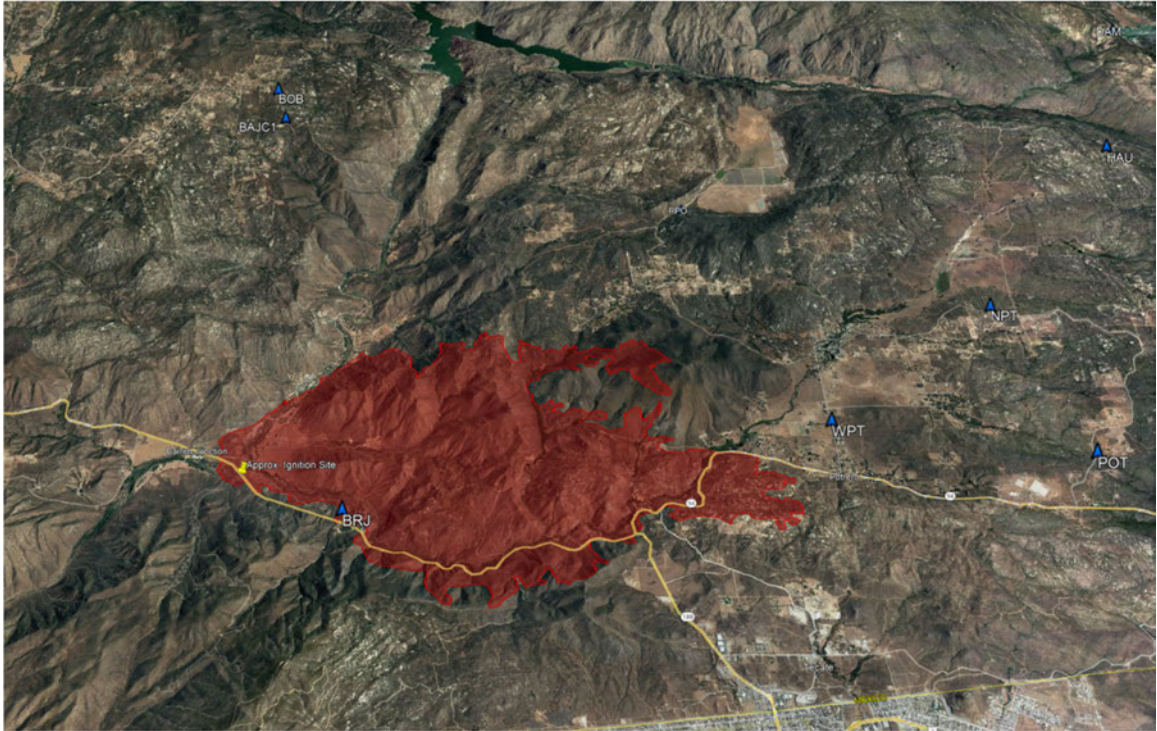

SDG&E Response

The nearest SDG&E weather station, located approximately one mile southeast of the estimated ignition point, reported a temperature of 101.6 degrees Fahrenheit, relative humidity of 23%, and a sustained wind of 17.8 mph with gusts to 25.9 mph from the south-southwest at the time of the incident.

33) Please provide a map of all utility weather stations located in the fire area and state the distance from the closest weather station to the incident location.

SDG&E Response

See below map with Border 32 Fire perimeter in red and weather station locations indicated by blue icons and identification codes. The closest weather station was approximately one mile southeast of the ignition location.

- 34) If SDG&E does not have any weather stations located in the fire area, provide a map of all non-utility weather stations used to obtain the information requested herein.

SDG&E Response

Please see response to question 33.

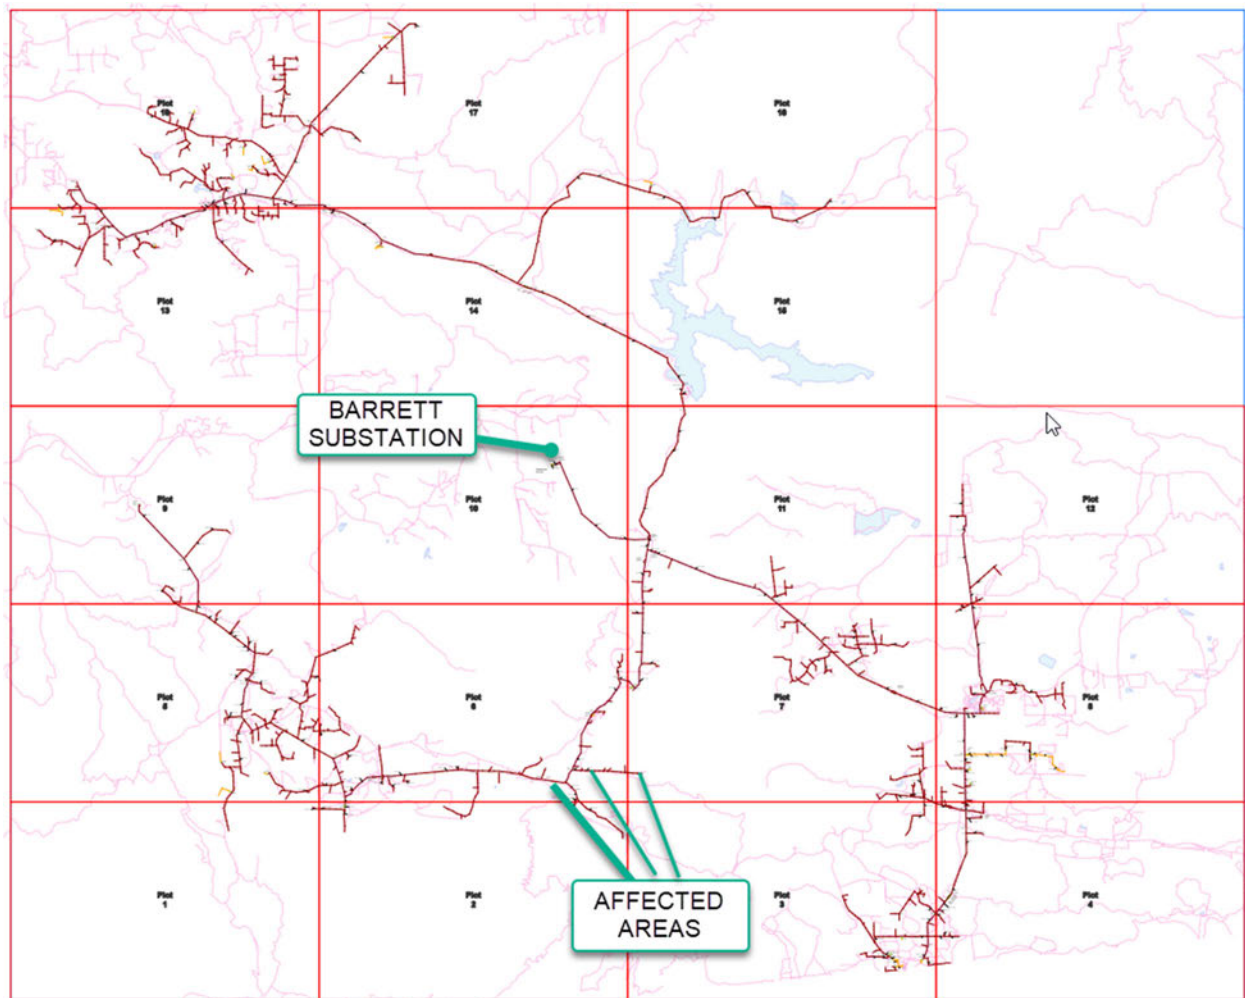

- 35) Describe what SDG&E first responders observed upon arrival at the incident location. Provide details and documentation, including but not limited to, photographs, notes, reports, text messages, etc. which reflect SDG&E first responder observations.

SDG&E Response

SDG&E first responders were initially not allowed into the affected area. They were on standby to respond to the needs of CalFire. Once allowed into the affected area the first responders communicated their observations by phone and radio. See photos below.

5) Provide single line diagrams, circuit maps, or schematics for the Subject Circuit. Provide complete facility inventory maps (FIM) of the Subject Circuit from the nearest substation to the Affected Section. Include any branch line connections.

a. On the FIM, clearly mark or highlight the location of all SDG&E Subject Poles and Subject Facilities identified, whether directly identified by asset number or referenced as a Subject Facility.

Re: Incident Company Property Damage over \$50,000
Date of Loss: 08/31/2022
Incident Number: Incident No: 220901-15253
Location: Barrett Lake (Border 32 Fire)

E-mail: USRB@cpuc.ca.gov and webmaster@cpuc.ca.gov

Dear Mr. Fong,

On 09/01/2022 at approximately 1920 hours, your office was notified of the above referenced incident via an online CPUC web-based electronic report by [REDACTED]. This letter constitutes our written report of that incident.

On 08/31/2022 at approximately 1456 hours, SDG&E was notified by a fire agency about a large acreage fire termed the "Border 32" fire. It is reported that over 4,000 acres burned. Within that area, there were 11 San Diego Gas & Electric (SDG&E) owned utility poles that sustained fire damages and were replaced. The total value of the damages has yet to be determined but they are anticipated to exceed the \$50,000 reporting requirement.

While the cause of the fire is still under investigation by the responding fire protection authority, SDG&E was not implicated. No injuries were reported.

We request this report be held confidential under the provisions of the CPUC Code, Section 583, and General Order 66C.

Sincerely,

[REDACTED]

- 1545 ETS and Electric Supervisor check in on scene.
- 1627 Mountain Empire district initiates a callout for all district personnel.
- 1700 Crew personnel begin to arrive in Mountain Empire district yard. Supporting elements from equipment Operations begin to arrive in yard.
- 1916 CalFire directs Electric Supervisor and SDG&E to stand down for the night
- 2000 157-273R trips with 309 customers out of power.
- 2017 ETS and Electric Supervisor remain with Fire Coordinator
- 2100 Mountain Empire District releases electric crews for the night.
- 2115 Utility Field Commander updates Technical Support Team with Estimated Restoration Time from 1200 to 1800 on 9/1/22.

9/1/2022

- 0500 Mountain Empire district begins checking in crew resources at facility.
- 0730 Utility Field Commander, Transmission Supervisor, and Fire Coordination attend CalFire briefing.
- 0745 CalFire grants SDG&E access to establish a laydown yard (command post) @ 20551 Highway 94, Dulzura, CA 91917.
- 0815 Utility Field Commander provides status update to the Director of Electric Regional Operations and Vice President of Electric Operations.
- 0915 CalFire grants SDG&E access to burn area and Electric Supervisor begins assessment of damage.
- 1000 Mobile Command trailer, district electric crews, and equipment operations arrive in the laydown yard.
- 1134 CalFire grants SDG&E access to begin restoration construction within burn area.
- 1545 CalFire authorized restoration of power to the west portion of circuit 157 via circuit 67 up to 157-1039. 157-273R remains open and de-energized.
- 1930 CalFire authorized SDG&E to energize mainline from 157-273R to open jumpers @ P175956.
- 1940 SDG&E closed 157-273R to open jumpers @ P175956 energizing mainline. Branch line fuses remain open @ P175952 for repairs. 157-1039 remains open for repairs.
- 2230 With repairs complete, SDG&E closed fuses @ P175952 energizing branch line.

9/2/2022

0010 With repairs complete, SDG&E closed jumpers @ P175956 energizing to open disconnects @157-1039.

0055 SDG&E closed disconnects 157-1039 making parallel.

Good morning Chris,

I am the electric supervisor for the crews that replaced the poles, and was tasked with coordinating saving the old debris.

The lay-down yard is not currently being used by any construction crews, we will most likely be the only ones present. Apologies [REDACTED], not trying to step on your toes, but a hard hat won't be necessary, there will not be any overhead hazards present.

I do have the equipment stored at the lay down yard as well.

[REDACTED], here is the list of poles that were replaced:

P873040
P874627
P874628
P874589
P874588
P873042
P874585
P873039
P873041
P873035
P175963
P971188
P175953
P874629

Please feel free to reach out with any further questions.

**NON-OPERATIONAL STANDARD PRACTICE PROCEDURE**

DIVISION ELECTRIC DISTRIB.ENGINEERING	DEPARTMENT TRANS. & DISTRIB. ENGINEERING	EFFECTIVE DATE 16 AUGUST 2017 Revised 23 JUNE 2022
SUBJECT TITLE INTERNAL INCIDENT INVESTIGATION AND REPORTING PROCEDURES		

PURPOSE

The purpose of this document is to outline internal investigation and reporting procedures for events on the electric system (Transmission, Distribution, and Substation). The investigation shall be conducted at the direction of the Law Department, with the assistance of the Claims Department, until and unless it directs otherwise. The goal of the investigation is to evaluate the event(s); attempt to determine the cause of, and contributing factors to, an event; to make recommendations as may be appropriate to prevent future incidents from occurring; and to provide a mechanism for tracking the progress of the process. This document is to serve as a guideline as each event is unique.

This document has been developed to ensure internal investigations are conducted thoroughly and consistently by SDG&E Engineering. This document is intended to supplement procedures that are in place by other groups, including Claims, Electric Operations, and the Law Department. There is no implication made by this document to replace or supersede any of the aforementioned policies and procedures.

APPLICABILITY AND REPORTING

This practice applies to any event that occurs on the electric system that may require an internal investigation. Reports to regulatory agencies, which may be required in relation to some incidents on the electric Distribution system, are outside the scope of this practice. Distribution Operations, Electric Regional Operations (ERO), and the Claims Department, in consultation with the Regulatory and Law Departments, have established procedures for determining when an incident requires reporting to regulatory agencies and which parties are authorized to submit such reports when required.

DEFINITIONS

- CPUC – California Public Utilities Commission
- EDE – Electric Distribution Engineering
- ICS - Incident Command System – A standardized management concept for event response that is used by all government entities. SDG&E is developing a document that outlines our procedures for following the ICS. Once published, this will be reflected to reference that document.
- IC - Incident Commander – The person responsible for all aspects of the incident response, including developing incident objectives and managing all incident operations

**NON-OPERATIONAL STANDARD PRACTICE PROCEDURE**

Claims		
Corporate Security	Corporate Security Operations Center	
Media Relations	Media Hotline	
Service Dispatch (Trouble)		
Technical Support Team (TST)		

Internal communications related to the initial incident or the subsequent internal investigation shall be done under Attorney-Client Privilege until the Law Department has determined that communications can be done without this protection. All written correspondences and emails shall include an Attorney in the To box, the Subject line shall include "Attorney-Client Communication: [Subject]," and the heading in the body of the email shall read "Privileged & Confidential." Please limit the scope of e-mail distribution to those who need to be involved, and do not distribute any segment of the communication to others outside of the essential distribution

If you are the first person to witness or learn of an event, notify your manager immediately. They will be able to notify the proper groups depending on the severity of the event. If your manager is not available, or if there is an immediate safety issue, contact the appropriate Control Center or Corporate Security. Claims, Regulatory, and the Law Department shall be the next groups notified if necessary. Corporate security can be utilized in securing the event site. Media Relations will handle all media inquiries related to any event.

Depending on the severity of the event, a briefing may be scheduled immediately to brief management on the event.

OVERVIEW OF PROCEDURES

Events shall be investigated for the purpose and in the manner identified in Section 1. Investigation leads will be assigned as follows to work with the Law and Claims Departments. For system operations related events, Grid Operations (Grid Ops) or Distribution Operations (Dist Ops) will assign an investigation lead. For District specific events, the District Manager will assign a lead. For Transmission and Substation events, including structure damage, fires, and wire downs, the Electric Transmission and Distribution Engineering department will coordinate with Kearny to assign an investigation lead. For events that require a substantial amount of investigation, reporting, and restoration work, a Project Manager from Major Projects shall be assigned to assist the Law and Claims Departments to coordinate

**NON-OPERATIONAL STANDARD PRACTICE PROCEDURE**

DIVISION ELECTRIC DISTRIB.ENGINEERING	DEPARTMENT TRANS. & DISTRIB. ENGINEERING	EFFECTIVE DATE 16 AUGUST 2017 Revised 23 JUNE 2022
SUBJECT TITLE INTERNAL INCIDENT INVESTIGATION AND REPORTING PROCEDURES		

the investigative efforts. The assigned investigation lead shall be in direct communication with the Incident Commander (IC) for the event.

A representative from Regulatory will also be assigned to the investigation, when such assistance may be necessary.

Forensic analysis will only be allowed once the IC has confirmed that the scene has been made safe.

ROLES OF INVESTIGATION TEAM PERSONNEL

Investigation teams will typically contain:

- Law Department (Litigation) Representative
- Investigation Lead – Designated investigation representative, in charge of directing the technical aspects of the investigation under the direction of the Law Department
- First Responders – The first people to arrive on site, including any SDG&E employees and Emergency Services
- Support Personnel – To assist the lead investigator with data collection and analysis efforts
- Regulatory / Compliance Representative – To assist with any regulatory requirements

Depending on the nature of the event and the expertise available among the SDG&E personnel on the investigation team, it may be useful to augment the investigation team with consultants. The Law Department, in consultation with the investigation team, will make a determination whether additional expertise is warranted, and if so, at what stage of the investigation consultants should be engaged (e.g., on-site investigation, and/or analysis phases). Subject matter experts within SDG&E, such as someone from system protection or work methods organizations, along with non-SDG&E consultants should be considered. Unless and until the investigation is no longer under the direction of the Law Department, the decision to retain a consultant will be made by the Law Department, in consultation with the investigative technical lead.

SITE INVESTIGATION

Access to the site for forensic analysis and other investigative efforts will only be allowed once the IC has confirmed that scene has been made safe. Timeliness of the site investigation is extremely important as restoration efforts can disturb the site. If no customers are affected by the incident, the site may be able to be preserved for a longer period of time. It is also very important to conduct the investigation with an unbiased mindset and to collect as much relevant data as possible.

Investigation kits, outlined in Attachment A, have been prepared ahead of time and are to be brought to the site. This kit will assist with the investigation and it includes things like a digital camera, evidence number tents, and evidence bags. These kits are located at strategic locations throughout the service territory; however if you are called out to an event, do not go out of the way to pick one up; someone

**NON-OPERATIONAL STANDARD PRACTICE PROCEDURE**

DIVISION ELECTRIC DISTRIB.ENGINEERING	DEPARTMENT TRANS. & DISTRIB. ENGINEERING	EFFECTIVE DATE 16 AUGUST 2017 Revised 23 JUNE 2022
SUBJECT TITLE INTERNAL INCIDENT INVESTIGATION AND REPORTING PROCEDURES		

can meet you at the site with the supplies. Attachment A outlines the kit locations. Additionally, the Claims Department maintains and carries much of the same materials. Please note: Investigation kits are currently not available. This document will be updated when they have been deployed.

For any event involving electric equipment failure, under the direction of the Law Department, the device manufacturer should be notified of all failures, especially if there is a warranty. Procurement or the Law Department should issue the formal notification. Often the manufacturer will want to conduct an investigation and perform testing on a failed device. Device warranties are usually held by the applicable department(s). The Law Department will need to review the terms of any possible warranties. Unless approved by the Law Department, devices are not to be released to a manufacturer, and any authorized examination and/or testing shall be coordinated with SDG&E and be observed by SDG&E representatives only.

No destructive testing will be conducted without the expressed approval of the Law Department. All evidence collected shall be catalogued and maintained consistent with Public Utilities Code, [Section 316](#), and General Order 95, [Rule 19](#).

Some general investigation practices and data sources are listed below. These are intended to be used as a guideline and this is not an exclusive list. These practices are to be performed under the direction of the Law and Claims Departments. Any data collected should be stored in a secure SharePoint site or as otherwise directed by the Law Department

FOR ALL MATTERS INVOLVING POTENTIAL THIRD PARTY LIABILITY AND/OR REGULATORY LIABILITY, INVESTIGATIONS SHALL BE PERFORMED AT THE REQUEST, AND UNDER THE OVERSIGHT AND DIRECTION, OF THE LAW AND CLAIMS DEPARTMENTS. For these events, do not undertake the following without obtaining initial approval.

Guidelines for the investigation

- Get to the site immediately, time is of the essence
- Coordinate efforts with the incident commander
- Have a meeting with involved personnel before beginning investigation
- Develop a brief event-specific plan before beginning the investigation. Make sure to include a list of the investigation team and their roles
- Preserve the site to the degree allowed by safety and operational conditions
- Conduct the investigation with an unbiased mindset
- Collect names and contact info for all first responders and nearby eyewitnesses
- In the event of equipment failure, notify the manufacturer as they will most likely want to conduct their own investigation and analysis. This is to be done under the direction of the Law Department. However, unless approved by the Law Department, devices are not to be released to a manufacturer, and any authorized examination and/or testing shall be coordinated with SDG&E and be observed by SDG&E representatives.

NON-OPERATIONAL STANDARD PRACTICE PROCEDURE

DIVISION ELECTRIC DISTRIB.ENGINEERING	DEPARTMENT TRANS. & DISTRIB. ENGINEERING	EFFECTIVE DATE 16 AUGUST 2017 Revised 23 JUNE 2022
SUBJECT TITLE INTERNAL INCIDENT INVESTIGATION AND REPORTING PROCEDURES		

Key steps for data collection

- Divide the site up into a grid
- Divide data collection efforts among your team
- Don't touch any evidence until it has been photographed
- Take lots of photos and make sketches – it is always better to have more data
- Smartphone cameras can supplement the cameras in the investigation kit
- For all close-up photos include a number tent and something for scale. A coin can be used for small items and rulers for larger items.
- Keep a photo log that has the time, short description, and location of the where the photo was taken. Use cardinal directions to establish the orientation of the picture and the item being photographed.
- Record the photo location on the site sketch with precise location measurements.
- Record the orientation of any debris in relation to its original position
- Store small evidence in an evidence bag and tag large pieces of evidence. Record the item's original location on the bag or tag with a permanent marker.
- If possible, the investigator should get up in a boom or scissor lift and take aerial photos of the site and the equipment under investigation. The investigator can get the necessary fall protection from the crew that is on site. Potential on-site data sources
- Eyewitness accounts, including employees, emergency services, and any other first responders
- Civilian eyewitness accounts
- Security photos and video (SDG&E, nearby businesses, traffic cameras). Corporate Security can assist with obtaining this data.
- Site sketch
- Photos
- Nearby damaged structures Supplementary data sources
- All maintenance and inspection records
- Condition Based Maintenance (CBM) data
- Downloaded relay records
- Fault data records
- Loading conditions
- Weather history
- Outage history
- Seismic activity history
- Equipment data such as the install date and manufacturer's specs
- Failure modes of the equipment
 - Photos from the original install or previous upgrades
 - Equipment nameplates and construction drawings, both design and as-built
 - System Operating Diagram

**NON-OPERATIONAL STANDARD PRACTICE PROCEDURE**

DIVISION ELECTRIC DISTRIB.ENGINEERING	DEPARTMENT TRANS. & DISTRIB. ENGINEERING	EFFECTIVE DATE 16 AUGUST 2017 Revised 23 JUNE 2022
SUBJECT TITLE INTERNAL INCIDENT INVESTIGATION AND REPORTING PROCEDURES		

INTERVIEWS

Interviews should be conducted as soon as possible after the event concludes, while memories are still fresh. Detailed notes should be taken and copies are to be made of any notes that the interviewee may have. First responders, including employees, emergency services, and on-site personnel, are to be interviewed. Any civilian eyewitnesses that were in the area should also be interviewed. Any notes and transcriptions from the interviews shall be uploaded to the secure SharePoint site for the incident. The goal of the interview is to obtain the interviewee's account of the entire event. Details to collect include other personnel on site, what was observed, and their involvement in the event.

TESTING AND ANALYSIS

ONLY at the direction and with the approval of the Law Department, and using information gathered during the site investigation coupled with supplementary information collected from other sources, site analysis may be performed to assess and confirm the cause of the incident. Some tests must be coordinated with multiple stakeholders involved in an incident, as multiple manufacturers or potential or actual third party litigations can be involved. By its nature, destructive testing can only be performed one time, so all parties should be notified of and present at the testing. Further, a written protocol shall be developed and agreed to by the participants prior to such testing and shall be followed precisely absent agreement for a deviation. For some devices, there are detailed publications that can assist with failure analysis. For example, the IEEE Guide for Failure Investigation, Documentation, and Analysis for Power Transformers and Shunt Reactors should be referenced in the event of a transformer failure. If a consultant is involved in the testing and analysis, efforts should be coordinated with the attorneys to ensure that any reports and conclusions are protected. All third-party reports will need to be included in the final internal report. INTERNAL INCIDENT

INVESTIGATION REPORT

Unless otherwise directed by the Law Department, an incident investigation report is to be prepared for every incident that is investigated. The report shall be directed to the Law Department, which will disseminate it as may be appropriate under the circumstances. The report should include an executive summary, observations, data collected, results, analysis, conclusion, and recommendations section. Recommendations are a key part of the report. Unless otherwise directed, recommendations should be made so that steps can be taken to prevent future incidents from occurring. A sample internal report template is included as Attachment D below. The original file, Internal Investigation Reporting Template can be downloaded from the [NERC Reliability Standards Webpage](#). This document is intended to be used as a guideline; some sections may not apply to every investigation, especially if equipment failure was not a contributing factor. The overall report structure and investigation sequence should be similar. Sections should be added or removed as necessary.

Incident Recovery:

- On Scene Date & Time: 8/31/2022 @ 5:15 p.m.
- Service Restored: @ 00:00 a.m.

Summary: On 08/31/2022 at 14:56 SDG&E was notified by the Fire Department of a large acreage fire. Currently over 4000 acres have burnt. We recently learned that there are multiple SDG&E owned utility poles on this property that sustained fire damages that need to be replaced. The amount of the damages has yet to be determined but will likely exceed the reporting requirement threshold of \$50,000.00. There are no reported injuries. The cause of the fire is not known.
