# **RE:** PacifiCorp (U 901 E), General Order 174 Substation Inspection Program Summary and Annual Report on Completed Substation Inspections

Dear Mr. Daye,

In accordance with General Order (GO) 174, PacifiCorp, d/b/a Pacific Power (PacifiCorp or Company) submits its Substation Inspection Program Summary and the annual report on Completed Substation Inspections.

Section 40.1 of GO-174 provides that no later than July 1, each electric utility shall submit an Inspection Program Summary. In addition, changes to the program summary are required to be reflected in the Inspection Program Summary. The Company's Substation Inspection Program Policy is provided as Appendix A. Appendix B provides the Substation Inspection Form, Appendix C provides the Substation Security Inspection Form (3274S), and Appendix D provides the Substation Inspection Intervals.<sup>1</sup> Since the last GO-174 report was submitted for calendar year 2014, there have been no changes to the Substation Inspection Program Policy.

GO-174, Section 40.2, requires each electric utility to provide a report summarizing the number of completed and past due substation inspections. Please refer to Appendix E. There are no past due inspections from 2018.

If you have any questions concerning this report, please contact Pooja Kishore, Regulatory Affairs Manager, at (503) 813-7314.

Sincerely,

Etta Lockey

Vice President, Regulation

Enclosure

<sup>&</sup>lt;sup>1</sup> This is an excerpt from Policy 001 (Rev 27) and is provided to show the intervals for substation inspections in California.

## **Substation Inspection**

Asset Management Policy 034

#### 1 Purpose

This policy provides the general requirements and objectives for the performance of physical inspections of substation facilities associated with the transmission and distribution system owned by PacifiCorp.

#### 2 References

- PacifiCorp Policy No. <u>001</u>, Maintenance Intervals for Apparatus, Relay and Communication Equipment
- PacifiCorp Policy No. 166, Maintenance and Inspection Records
- Substation Inspection Form <u>3274F</u>

#### 3 Objective

Substation inspections include a visual inspection of substation components, performance of minor testing or operational tasks, performance of minor housekeeping tasks and the recording of various equipment readings and measurements. The purpose of these tasks is to check the security of the substation, note obvious defects in equipment installation or performance, verify the physical operation of certain equipment and record data that is utilized by others for load planning or maintenance planning purposes. Discrepancies or issues found during the performance of inspections may be corrected on site immediately, or noted on the inspection documentation and prioritized for later repair.

- **3.1** Intervals: Substations shall be inspected on a periodic basis per the intervals and requirements listed in Policy 001, *Maintenance Intervals for Apparatus, Relay and Communication Equipment.*
- **3.2** Scope: The requirements for the scope of substation inspections are as listed on form 3274. Field offices may utilize this form, or its functional equivalent, which may be customized for each individual substation. The scope of a substation inspection includes the following, however, the interval between individual tasks will vary per the requirements of form 3274F and Policy 001.
  - **1.** Substation security inspection
  - 2. Substation physical inspection / operational tests
  - 3. Recording operational counters and load readings
- **3.3** Documentation : Inspection records shall be stored and retained per the requirements of Policy 166, *Maintenance and Inspection Records*.
- **3.4** Use of SCHOOL System: It is preferred that load readings be recorded with the use of SCHOOL handheld computers. The readings are then uploaded to the SCHOOL sytem. As an alternative, readings may be taken manually and then entered into SCHOOL using the Manual Logger PC Software. For stations with SCADA where readings are entered into school directly from the SCADA system, field readings need not be taken.

## PACIFICORP T&D SUBSTATION INSPECTION

Author:Brandon PrescottApproval:Jack VranishAuthoring Department:Asset ManagementApproved Location:PacifiCorp.us\Dfs\Pdxco\Shr04\Eng\Publications\FPP\SUB\FORMSFile Number-Name:3274F-FORM-PacifiCorp T and D Substation Inspection.xlsxRevision Number:R10Revision Date:3/9/2015

http://idoc.pacificorp.us/content/dam/intranet/doc/ap/policies\_and\_procedures/eamp/sc/fpp/[3274F.xlsx] The most current version of this document is posted to PacifiCorp's engineering websites. Modification of this document must be authorized by engineering publications, (503) 813-5096.

Form # 3274F Rev 10 3/9/15	PAC	IFICORP T&D SUBSTATI	ON INSPECTION
Substation Name:	Date: / /	Inspector:	Work Order #:

**Type of inspection conducted:** Minor Inspection 
Major Inspection

## Instructions:

- Complete a Substation Security Inspection Form for <u>all</u> inspections.
- For *Minor Inspections* complete the Substation Security Inspection Form and all fields except those labeled "only required for Major Inspections".
- For *Major Inspections* complete the entire packet.
- All completed inspection forms shall be given to the local substation manager.
- See <u>Policy 001</u> for inspection interval requirments.

#### **Substation Operations Manager Review**

Manager:	Date:	Signature:

Appendix D Substation Inspection Intervals

Equipment Type	Equipment Description	Equipment Use	Equipment Model or Manufacturer	Operating Ratings	Maintenance Task	Equip. Code	Maintenance ID	Interval Years (Mths)	Interval Months	Man Hours	Ops Counter	Fault Operations	Notes
Substation	Substations or FII				Sub Safety / operational inspection		XXX-SBIN-001-XXX	MTHLY see note 1	1	DIST 2 LOC 3 MGT 4			Periodic substation security and operational inspection, load and counter reads / minor / major scope performed periodically

1) Work orders are generated on a monthly basis - however for substations associated with WECC critical paths (WECC - FAC-501) a minimum of 10 monthly inspections shall be performed with 3 of these monthly being the more detailed "major" shall be performed annually. The maximum interval between the monthly inspections shall be 65 days with 180 days the maximum interval between a major inspection. For all other substations assigned this maintenance ID Company policy requires a minimum of 7 inspections be performed annually with no more than 120 days between consecutive monthly or 180 days between the more detailed major inspections.

## MAINTENANCE INTERVAL LIST **Apparatus Equipment**

Appendix E Completed and Past Due Substation Inspections

## PacifiCorp General Order 174 Substation Inspections 2018 Annual Report

The total completed and past due substation inspections performed in the State of California for calendar year 2018 is as follows:
