To: Utilities Safety and Reliability Branch Safety and Enforcement Division California Public Utilities Commission

Liberty Utilities (CalPeco Electric) LLC (U 933-E) 2020 Substation Inspection Program Summary

Purpose

Pursuant to California Public Utilities Commission ("CPUC") General Order 174 ("G.O. 174"), Liberty Utilities (CalPeco Electric) LLC (U 933-E) ("Liberty") provides this summary of its Substation Inspection Program for the 2020 calendar year.

Requirements of General Order 174

G.O. 174 sets forth the "requirements for substation inspection programs, the application of which will promote the safety of works and the public and enable adequacy of service." G.O. 174 applies to "electric utilities subject to the jurisdiction of the [CPUC]," but "facilities subject to the California Independent System Operator operational control and/or the FERC reliability standards and Customer Substations are exempt."

Under G.O. 174, "Operators" (which includes Liberty) must provide, no later than July 1 of each year, an Inspection Program Summary. The Inspection Program Summary will include a "report summarizing completed and past due Inspections for the prior calendar year" and describe "[c]hanges to the Inspection Program... including the effective date of the change." Furthermore, "[s]hould no changes occur since the previous filing, the Operator shall transmit written correspondence confirming that no changes were made to the Program."

Liberty's Substation Inspection Program

As required by G.O. 174, Liberty established its Substation Inspection Program based on accepted best utility practices. The full Substation Inspection Program is attached to this Summary and was most recently revised on May 15, 2020.

Staff responsibilities are described in Section 6.0 of the Substation Inspection Program. Detailed observation questions and test specifications are outlined in Sections 7.0 of the Substation Inspection Program for each type of equipment to be inspected. Criteria for general substation inspections are detailed in Section 7.1.9.

Liberty's inspection records include the inspector's name, inspection date, a brief description of any identified discrepancies, and any corrective actions taken. The records also include test and observation results specific to each piece of equipment being inspected.

Inspections Performed in the Prior Calendar Year

Inspection Type	Completed in 2020	Past Due in 2020
G.O. 174 Substation Inspections	44	2

In 2020, a total of 44 inspections were completed, and 2 inspections were past due.

Liberty's substation inspection program details that inspections should be completed on a quarterly basis for the following 11 of Liberty's 13 substations:

- 1. Brockway Substation
- 2. Cemetery Substation
- 3. Glenshire Substation
- 4. Kings Beach Substation
- 5. Meyers Substation
- 6. Northstar Substation
- 7. Portola Substation
- 8. Sierra Brooks Substation
- 9. Squaw Valley Substation
- 10. Stateline Substation
- 11. Tahoe City Substation

All of these inspections were completed with the exception of the Q4 inspection of Northstar substation.

Liberty's Substation Inspection Program states that the Hobart and Stampede Substations will be inspected annually in quarter two or three as weather permits. Hobart Substation was accessible and inspected in June 2020. The inspection of Stampede Substation was missed in 2020.

Both substation inspections for both Northstar Q4 and Stampede were completed by a former employee of Liberty, and inspection records did not sync with the inspection record server before the former employee's departure. As a result, record of the inspection was not recorded.

Since then, Liberty has implemented controls to properly synchronize inspection records to the inspection record server, including training on the inspection app for substation personnel.

Daniel W. Marsh Manager of Rates and Regulatory Affairs Liberty Utilities (CalPeco Electric) LLC

GENERAL PROCEDURE		Proc. #:	8800-0000-15-09	
Description:	Substation Inspection Program	Revision #:	3.0	Page: 3 of 13

2.0 Purpose

This procedure documents Liberty Utilities (CalPeco Electric) LLC's Substation Inspection Program. This Program focuses on inspecting equipment and support structures while patrolling through a substation. These inspections are separate from scheduled preventative maintenance and corrective maintenance activities performed at substations as required to satisfy NERC Reliability Standards.

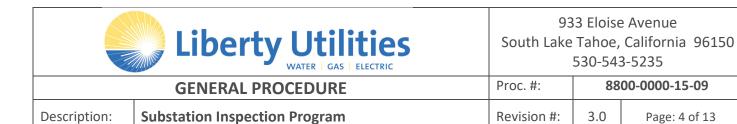

3.0 Scope/Applicability

The substation equipment includes, but is not limited to, batteries, buses, support structure, capacitor banks, circuit breakers, fire detection and suppression systems, grounding systems, insulators/bushings, arrestors, perimeter fences and gates, transformers, reactors, and voltage regulators. The CalPeco's substations included in this program are:

- Brockway
- Cemetery
- Glenshire
- Hobart
- Kings Beach
- Meyers
- Northstar
- Portola
- Sierra Brooks
- Squaw Valley
- Stampede
- Stateline
- Tahoe City

The inspection records are maintained on the Liberty Utilities' Compliance SharePoint <u>Maintenance</u> <u>Center</u>.

Protection equipment maintenance and test requirements applicable to the NERC Reliability Standards are defined and controlled through Procedure 8800-150-200-006, Protection System Maintenance, and are not repeated in this procedure.

4.0 Definitions

Term	Definition
Customer Substation	A Substation that functions as the main source of electric power supply for a single customer, including those that provide feed through for additional customers.
Discrepancy	A noteworthy anomaly, material, or structural deficiency.
Inspection	A basic evaluation, generally performed using visual and auditory senses, but which could be conducted by other means.
Operator	An electric utility subject to <u>General Order 174</u>
Substation	An assemblage of equipment (e.g., switches, circuit breakers, buses, and transformers) under the control of qualified persons, through which electric energy is passed for the purpose of switching or modifying characteristics.
Substation Operator	The personnel who, by reason of training, experience, and instruction, are responsible for inspecting and maintaining substation equipment.

5.0 Other References

California Public Utility Commission General Order 174, Rules for Electric Utility Substations, Adopted October 25, 2012 by Decision 12-10-029.

6.0 Responsibilities

Person	Responsibility
Director, Operations	 Monitor the maintenance intervals to ensure maintenance cycles are met. Review contractor maintenance records for completeness and accuracy. No later than July 1st of each year, provide an Inspection Program Summary to the Utilities Safety and Reliability Branch (USRB) of the California Public Utilities Commission (CPUC). The report should include the total number of completed and past due inspections for the prior calendar year.
Engineer, Substation	 Ensure all inspections are carried out in accordance with the schedule as described in Section 7.0. Review inspection results to ensure discrepancies and degradation are addressed in a timely manner. Provide inspection data and records to Operations Director. Upload Inspection files to the Liberty Utilities SharePoint site.

WATER GAS ELECTRIC				
GENERAL PROCEDURE		Proc. #:	8800-0000-15-09	
Description:	Substation Inspection Program	Revision #:	3.0	Page: 5 of 13

Operator/Technician	Report to the Director of Operations any observations of equipment degradation during substation visits through the Substation Inspection Report.			
	Perform inspections described in Subsections 7.1 through 7.9 below.			
	Record results in the Substation Inspection Report including the following			
	information at a minimum:			
	 Inspector name or identification number / code 			
	 Inspection date 			
	 Inspection results 			
	 Discrepancies identified 			
	 Corrective actions, completion date, and / or reference 			
Compliance	Upload inspection files to the Liberty Utilities' Compliance SharePoint site.			
Administrator (Cooper	Enter inspection data in the website as specified in Section 13.0 below.			
Compliance)	 Assist Operations Director in preparing annual filing to the CPUC by July 1st. 			

7.0 Procedures

7.1 Substation Inspections

Maintenance and inspection of substation equipment are necessary to promote the safety of workers and the public and to ensure adequacy of service. The sections below define the routine inspections performed on the substation equipment identified in the scope of this procedure, Section 3.0.

Substation Patrol Inspections are to be performed quarterly with the exception of Hobart and Stampede, which can only be inspected once per year due to access issues. When scheduling does not permit inspections every three months, they must be conducted no longer than four months from the previous inspection.

The inspection records are maintained in the Liberty Utilities' Compliance SharePoint site in the Maintenance Log Library. The following inspections are to be performed and the conditions recorded for each type of equipment as specified below:

7.1.9 Substation General Inspections

Step	Test
Verify	 Insulator condition is good All air break switches are okay All ATS systems are operational Station/control house lights are good Air conditioners/heaters are functional Eye wash station is good Fire extinguisher is good Indicator lights are good Batteries and chargers are good Relay targets are logged and reset Check and sign log book Fence or gate condition is good Weeds are maintained Buses are good Support structures are good Capacitor banks are good Reactors are good

8.0 Training Requirements

Inspections shall be performed by persons who, by reason of training, experience and instruction, are qualified to perform the task.

9.0 Personal Protective Equipment (PPE)

Appropriate PPE will be worn by personnel performing maintenance or working on or around the associated electrical equipment.

10.0 Documentation / Recordkeeping

Electronic or hard copy records of completed inspections shall be retained for not less than five (5) years in Liberty Utilities' Compliance SharePoint site.

11.0 Related Documents and Forms

13.0 Appendix – Maintenance Log

13.1 Liberty Utilities' Compliance SharePoint Instructions

Log in to <u>Liberty Utilities Compliance Center</u> using the appropriate credentials.

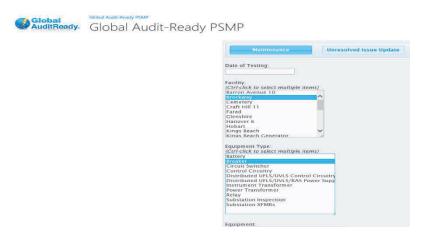

Then select Liberty Utilities Maintenance Center at the top tab.

Select Add New Test Record (Global Audit-Ready PSMP) shown in the screen shot below.

Select the Facility, Equipment Type and Equipment. Then select all the check box before uploading the document. See the screen shot below for illustration.

Enter the actual inspection data corresponding to the form questions. Select the Submit button at the top to complete the process. See the screen shot below for illustration.

The last step is to upload the inspection records into the "Global Audit-Ready Maintenance Log" Document Library.
