Kenneth Bruno Program Manager Gas Safety and Reliability Branch Safety and Enforcement Division **California Public Utilities Commission** 505 Van Ness Avenue San Francisco, CA 94102

RE: Response to May 9-11, 2016 Audit Findings Letter dated September 4, 2016

Dear Mr. Bruno,

Following are West Coast Gas Company Inc.'s response to the SED Probable Violations and Areas of Concern /Observations / Recommendations.

If you have any questions, please feel free to contact me at 916-364-4100, Monday through Friday, 7 am to 3:30 pm.

Sincerely,

Mark Williams

Mark Williams President

cc: Banu Acmis Jason McMillian

SUMMARY OF INSPECTION FINDINGS

I. Probable Violations

Title 49, Code of Federal Regulations (CFR), §192.805 Qualification program

Each operator shall have and follow a written qualification program. The program shall include provisions to:

(a) Identify covered tasks;

(b) Ensure through evaluation that individuals performing covered tasks are qualified;

(c) Allow individuals that are not qualified pursuant to this subpart to perform a covered task if directed and observed by an individual that is qualified;

(d) Evaluate an individual if the operator has reason to believe that the individual's performance of a covered task contributed to an incident as defined in Part 191;

(e) Evaluate an individual if the operator has reason to believe that the individual is no longer qualified to perform a covered task;

(f) Communicate changes that affect covered tasks to individuals performing those covered tasks; (g) Identify those covered tasks and the intervals at which evaluation of the individual's qualifications is needed;

1. SED reviewed the covered task list provided in the OQ plan, titled "OQ 11.1: Identified Covered Tasks," as well as the subject matter expert survey that was used to create the covered task list.

SED identified the following covered tasks that are not listed in the covered task lists in WCG's OQ Plan.

- Leak repair by clamp
- Valve Maintenance: repair, replace, and/or refurbish a valve

SED noted that WCG must add the aforementioned tasks and all other unlisted tasks that WCG currently performs to its covered task list as per Title 49, CFR §192.805 (a) & (g).

Additionally, WCG must establish training and evaluation methods suitable to ensure its employees and contractors are qualified to perform the newly added covered tasks as per Title 49, CFR §192.805 (b). Training material and testing must include task specific Abnormal Operating Conditions (AOC) for the newly added covered tasks.

Moreover, WCG must communicate with WCG's personnel about changes to the OQ program which affect the individuals performing such tasks as per Title 49, CFR §192.805 (f).

Please provide SED with the revised sections of the OQ Plan, training & evaluation program along with reevaluation interval determined for the newly added covered tasks that address the identified deficiencies.

WCG RESPONSE

During the audit performed onsite at WCG on May 9-11, 2016, WCG agreed with the above audit finding. WCG has provided the revised section OQ 11.1, revision date May 1, 2016 (at page 88) with the required changes. The revised list of Identified Covered Tasks includes two additional covered tasks including "valve corrective maintenance" and "install mechanical clamps and sleeves, bolted". See classroom training modules 6.1 and 6.9 listed in OQ11.4, revision date May 1, 2016, at page 99. The field evaluation program includes OQ 723-A and OQ 747 (see attached). The reevaluation interval(s) are respectively: 3 years for valve corrective maintenance (see OQ 11.2 revision date May 11, 2016, at page 91); and 3 years

for Install Mechanical Clamps and Sleeves, bolted (see OQ 11.2 Revision Date May 11, 2016, at page 92).

2. Title 49, CFR, §192.805 Qualification Program states in part:

"(d) Evaluate an individual if the operator has reason to believe that the individual's performance of a covered task contributed to an incident as defined in Part 191; (e) Evaluate an individual if the operator has reason to believe that the individual is no longer qualified to perform a covered task;..."

WCG Procedure "OQ-6: Individual is No Longer Qualified to Perform a Covered Task" states, "if an individual has lost qualifications to perform a covered task or tasks, the individual may be re-evaluated by WCG and gain approval once more."

SED noted that the above mentioned procedure is overly vague, and does not include a requirement to retrain, either fully or in part, an individual who is deemed no longer qualified to perform a covered task.

SED determined that WCG must state in greater detail the procedure to ensure adequate re-qualification of an individual whose qualifications had previously been brought into doubt as per Title 49, CFR §192.805 (e), especially if the individual may have contributed to an accident or incident involving the pipeline facilities as per Title 49, CFR §192.805 (d). WCG must consider providing additional or refresher classroom and/or field training necessary for the individuals to obtain qualifications to be able perform the covered tasks successfully.

Please provide SED with the revised version of the OQ Program procedures which address the deficiency identified above.

WCG RESPONSE

WCG OQ Plan at section OQ 3 revision date May 20, 2016 at page 9 includes the section "Frequency of Re-Training / Re-Evaluations. On page 10, it states,

"Successful completion of the knowledge based evaluation, either written or oral, requires a score of 80%. All of the required skills and abilities must be passed or retraining and successful evaluation must be completed on those that did not pass." It also states, "At the Operations Manager's discretion, WCG will provide remedial training such as on-the-job training or repeating the GTI Training Module for the failed tasks."

Please note that WCG OQ5, "Response to An Incident" was extensively revised with the current revision date of May 20, 2016. Section OQ 5 describes the investigation that WCG would perform post-incident, and the corrective actions that would be taken by the Operations Manager. At page 16, the May 20, 2016 revision of WCG OQ 5 states the following:

"If remedial training is determined necessary, the Operations Manager will ensure that it is provided. He will direct that the individual to repeat the appropriate GTI Training Module(s), take and pass the written test, and ensure that the appropriate Field Evaluation is conducted, passed, and documented. If new or revised training is necessary, the Operations Manager will use his discretion to determine whether to revise the WCG training, engage a third party to provide the training, or determine other appropriate solutions." WCG transmitted the OQ Revisions dated May 20, 2016 by electronic mail to Ms. Banu Acimis and Mr. Jason McMillan on May 20, 2016 time stamped at 3:23 pm.

II. Areas of Concern/ Observations/ Recommendations

1. Title 49, CFR, §192.803 states in part:

"Qualified means that an individual has been evaluated and can: (a) Perform assigned covered tasks; and (b) Recognize and react to abnormal operating conditions."

SED reviewed the OQ plan provided by WCG, as well as its computer-based modules that WCG uses as training materials, and the forms WCG uses during field tests to qualify individuals on certain tasks. SED found no comprehensive list of task-specific abnormal operating conditions (AOCs) within the OQ plan since most of the training modules reviewed only contained a single AOC related to a task.

SED is concerned that the AOCs presented during training as well as the AOCs reviewed during evaluation are not task specific. Therefore, SED recommends that WCG compile a more comprehensive list of AOCs that are specific to the tasks that qualified individuals must learn to be able to recognize and react to them while performing related covered tasks.

SED also noted that general AOCs listed in WCG's Training Module 10.2 should also be incorporated into the OQ Plan. Additionally, task specific AOCs that appear on the new field forms should be expanded and employees should be trained accordingly.

Moreover, SED recommends these task-specific AOCs be incorporated into the training and evaluation portions of WCG's OQ program.

Please provide SED with list of AOCs that are specific to each covered task and related sections of the OQ Plan that address the deficiencies identified above.

WCG RESPONSE

AOCs pertaining to specific covered tasks are incorporated in the Field Evaluation Forms, see attached evaluation forms for Evan Rahilly.

In addition, GTS has developed an AOC Quiz to use in training and evaluation, see attached.

2. SED noted that since WCG's training modules 10.1 & 10.2 provide essential information for natural gas, general abnormal operating conditions, and emergency preparedness; WCG should provide these training modules to all employees in the company.

WCG RESPONSE

The WCG OQ Plan includes OQ 3 revision date May 20, 2016, at page 10 which states:

"WCG has adopted the Gas Technology Institute (GTI) Natural Gas Field Skills Training as its source of training for Operator Qualification assessments. Natural gas field skills training will be used for all workers that are performing covered tasks. The standardized training materials are designed for a quick turnaround with basic field skill training for utility and contractor staff. A list of the classroom training modules can be found in OQ 11.4: WCG GTI Classroom Training Modules. 3. WCG informed SED that it is in the process of hiring and training a new employee for its Castle gas distribution system. Please provide operator qualification records for the employee with the list of covered tasks that he is responsible for performing along with evaluations records.

WCG RESPONSE

WCG hired Evan Rahilly for Castle. He is currently completing the GTI Program and will be finished by the end of October. Attached are his completed GTI tests.

He is OQ qualified for the following tasks; Inside & Outside Gas Leak Investigation, Electrofusion, Damage Prevention and Locating Underground Pipelines. OQ FE forms attached.

FORM OQ 747: VALVE CORRECTIVE MAINTENANCE

Supersedes All Previous Dates

Start Date: September 26, 2016

Canceling Date: New

PARTICIPANT:

DATE:

LOCATION OF EVALUATION:

INSTRUCTIONS FOR EVALUATOR: Observe the following performed independently by the participant:

- 1) Identified requirements which include corrective maintenance of a valve.
- 2) Select the correct equipment and perform the corrective maintenance independently.
- 3) Observe abnormal operating conditions and record documentation.

STEPS TO PERFORM	EVALUATION CRITERIA (PERFORMANCE ACCEPTABLE IF:)	PASS	FAIL	NA
 Gather appropriate procedures and equipment 	Val-Tex 1400 Hydraulic Lubrication Gun (Flush)(Grease), Valve Wrenches, Pipe Wrenches, Leak Soap, leak detector, packing, traffic cones/barricades, traffic permit, PPE. WCG Maintenance procedure 747. Maps/plans for the right system.			
2) Identifies the valve.	Can explain how they know they are at the right valve and can show you which one it is on the map and by number.			
3) Locates the valve.	Can find the valve in the field by using map, measurements, and physical points of reference.			
4) Verifies the valve position.	Can tell you if the as-found position is open or closed. If performing Flushing/greasing/exercising, verifies full open position.			
 Communicates with operating personnel. 	Notifies operating personnel about plan of action.			
6) Performs corrective maintenance, as applicable.	Assesses what is needed. Takes action such as clean out valve box, replace broken valve box, adjust or replace packing or seals, flush/lubricate/exercise valve, replace valve following Maintenance 747 in detail, replace steel valve with section of poly and poly valve including transitions and couplings.			
 Notifies operating personnel, completes forms. 	Records actions taken on Form 747 for the system being worked.			
ABNORMAL OPERATING CONDITIONS QUESTIONS ASKED	PARTICIPANTS REPONSES /REACTIONS TO AOCs DESCRIBED	PASS	FAIL	NA
1) What AOCs might occur or be found during this task?	Valve buried or paved over. Unable to locate valve. Mismapped or wrong records. Wrong valve wrench or key. Unable to operate valve. Valve broken or unrepairable. No lubricant/wrong lubricant. No way to add lubricant. Inadequate tools. Valve box flooded. Hazardous leak in valve box. Vehicle or other obstacle. Permits needed in traffic lanes. No valve packing available. Seepage or leakage near the fitting or the coupler after the repair.			
2) What if the maps/records are incorrect?	Make a note of what error you found, mark up the map/record. Notify the field supervisor and/or the Operations Manager so the error in the maps/records can be fixed back in the office.			
3) What would you do if valve fitting is seeping or leaking near the coupler after the repair?	Inspect the coupler washer and the fitting for defects or debris. If needed, tighten the coupler back on to the button head fitting.

FORM OQ 723-A: INSTALL 500 SERIES REPAIR CLAMPS

Supersedes All Previous Dates

Start Date: September 26, 2016

Canceling Date: May 20, 2016

PARTICIPANT:

DATE:

LOCATION OF EVALUATION:

INSTRUCTIONS FOR EVALUATOR: Observe the following performed independently by the participant:

- 1) Identify requirements for conducting the installation of 500 Series repair clamps.
- 2) Select the correct equipment and perform the installation properly.

3) Observe abnormal operating conditions and record documentation.

EVALUATION CRITERIA (PERFORMANCE ACCEPTABLE IF:)	PASS	FAIL	NA
Select appropriate equipment, PPE, correct size leak clamp, small tools. Leak soap.			
Clean the main and/or service line a thoroughly as conditions permit. Make sure all burrs and debris are removed.			
Slip bolt heads out of bar and fit clamp on pipe centering the clamp over the damaged area. Slip bolt heads back into bar/lug. Rotate clamp in direction indicated by arrow on clamp band until gasket overlap is smoothed out.			
Tighten evenly, alternating between nuts. Use 35 foot-lbs for 2"- 3.5" diameter pipe. Apply 50 ft-lbs to 4"-8" diameter pipe.			
PARTICIPANTS REPONSES /REACTIONS TO AOCS DESCRIBED	PASS	FAIL	NA
Flammable atmosphere; Blowing or escaping gas; smelling or hearing a gas leak, unable to obtain a secure leak tight fit between pipe and clamp.			
Notify Field Supervisor or Operations Manager. Determine whether additional area should be isolated or shutdown. Determine other repair method to use. Notify customers of gas outage, if applicable.			
Call 911; Evacuate people and block the area; Activate the WCG call list; Ask for help; Make plans to isolate the leak by shutting off the area or bringing it under control; Shut off customers in the area; Check the surrounding area for migrating gas; See WCG Emergency Plan for detailed procedures.			
Take continuous action to protect life and property; Establish open communications with the Operations manager; Determine where is the gas and where is it migrating to; Check surrounding areas and buildings; Eliminate the gas source by shutting off gas meter, service line or other sources; Address repairs for Grade 1 leak.			
	 Select appropriate equipment, PPE, correct size leak clamp, small tools. Leak soap. Clean the main and/or service line a thoroughly as conditions permit. Make sure all burrs and debris are removed. FORM OQ 281-B: JOINING OF PLASTIC PIPE ELECTROFUSION Supersedes All Previous Dates Start Date: January 4, 2016

Canceling Date:

PARTICIPANT: (VAN) RAH: 1/4

DATE: 9-14-286

LOCATION OF EVALUATION: RAST of BUILDING 535 IN GRANKL ATRA

INSTRUCTIONS FOR EVALUATOR: Observe the following performed independently by the participant:

- 1) Identified requirements which include assembly and joining of plastic pipe by electrofusion of completed joints.
- 2) Select the correct equipment and perform the electrofusion independently.
- 3) Observe abnormal operating conditions and record documentation.

STEPS TO PERFORM	EVALUATION CRITERIA (PERFORMANCE ACCEPTABLE IF:)	PASS	FAIL	NA
 Select the task procedure(s) and appropriate equipment 	Select appropriate equipment.			
2) Verify materials, as applicable	Pipe and fittings.	~		
 Perform joining equipment check 	Checking pipe scraping tool, pipe restraint, electrofusion processor, correctly sized equipment.	~		
 Select fitting, clean and inspect pipe and fittings surfaces to be fused. 	Clean pipe and fittings, scrape pipe surface at point of fusion, mark stab depth on pipe wall, if applicable.	/		
5) Set up electrofusion equipment	Install fitting, install pipe restraint, scan fitting bar code if applicable, secure processor leads.	/		
6) Join fitting and pipe	Activate fusion processor, remove processor leads once cycle in complete, cool prior to movement.	\checkmark		
ABNORMAL OPERATING CONDITIONS QUESTIONS ASKED	PARTICIPANTS REPONSES /REACTIONS TO AOCs DESCRIBED	PASS	FAIL	NA
	Flammable atmosphere; Blowing or escaping gas; Fire on a pipeline; Static current on a pipeline; Odor complaint.	~

DATE: 9-14-226

PARTICIPANT: EVAN RAHilly LOCATION OF EVALUATION: All OF CASTLE AREA

INSTRUCTIONS FOR EVALUATOR: Observe the following performed independently by the participant:
1) Participant demonstrates understanding of importance and steps involved in protecting underground facilities from damage.
2) Select the correct equipment and perform correct equipment checks.
3) Recognize and react to abnormal operating conditions and record documentation.

STEPS TO PERFORM		PASS	FAIL	NA
SIEPS IU PERFURM	EVALUATION CRITERIA (PERFORMANCE ACCEPTABLE IF:)	PASS	FAIL	NA
1) Identify requirements	Underground Service Alert (call 811) WCG will provide temporary location marking of all buried gas facilities in an area where excavation intent has been received when a request/notice for gas facility locates has been made by the public, other companies or operators or recognition by WCG personnel, at least 24 hours before beginning excavation work.	~		
 At job site, verify WCG facilities have been located and marked 	WITH YELLOW PAINT, FLAGS, OR LINE MARKEAS,	\checkmark		
 Enforce damage prevention during and after excavator activities 	Stand by, inspect WCG pipeline for damage. Ensure WCG pipeline is physically located prior to excavation. Ensure exposed pipeline is supported or protected during excavation. Inform excavator to stop excavation if any unusual operating activities are observed.	~		
 Implement damage prevention actions during excavation activities 	Use hand tools only when digging within 18 inches of buried utilities. WCG will hold field meet with excavators to ensure safety of WCG owned gas facilities.	~		
 Recognize and react to AOCs 	WE DISCUSSED NO WHITE PAINT SHOWING USA. LOCATION	/		
6) Complete necessary documentation	Form 614	/		
ABNORMAL OPERATING CONDITIONS QUESTIONS ASKED	PARTICIPANTS REPONSES /REACTIONS TO AOCs DESCRIBED	PASS	FAIL	NA
 What AOCs might occur or be found during this task? 	Flammable gas atmosphere; Blowing or escaping gas; Fire on a pipeline; Odor complaint; Pipe or coating damage including pipeline components; Poor compaction; Lack of pipeline support or unintended movement; Confined space; Missing/broken tracer wire; Inaccurate maps and records.	/		
2) What can you do if excavators are working at a job site where 811 was not called?	Notify the excavator of unsafe practices; Request that the work be stopped; Ask of assistance from the Operations Manager	~
