Regular Agenda – Energy Orders

Item # 9 [14623] – Order Instituting Rulemaking to Develop an Electricity Integrated Resource Planning Framework and to Coordinate and Refine Long-Term Procurement Planning Requirements

R_____

PROPOSED OUTCOME:

- This rulemaking will consider the impact of Senate Bill 350 (DeLeon, 2015), in particular the sections of the law related to integrated resource planning (IRP), on the Commission’s regular biannual long-term procurement planning (LTPP) process.
- The proceeding will primarily focus on bringing together various ongoing analytical efforts from other proceedings, along with new analysis to be conducted in this proceeding, in order to create a framework for IRP filings of regulated load-serving entities (LSEs) in the future. Ultimately, the Commission is responsible for ensuring optimized portfolios of its LSEs to achieve the electric sector greenhouse gas reduction goals by 2030, in a manner that preserves system reliability, at reasonable costs, while also meeting other statutory requirements.
- In addition to the IRP focus, this rulemaking will also be the venue for the Commission’s ongoing LTPP responsibilities aligned with the integrated Energy Policy Report of the California Energy Commission and the Transmission Planning Process of the California Independent System Operator.
- Should the Commission need to consider bundled procurement plans of the electric utilities within the next two years, this rulemaking will also be the venue for consideration of those plans.

SAFETY CONSIDERATIONS:

- This proceeding will focus primarily on planning to ensure long-term reliability of the electricity system, which impacts safety of the system and utility customers.

ESTIMATED COST:

- Unknown at the outset of the proceeding. Individual proposals considered in the course of the proceeding will determine if there are costs associated with additional electricity procurement that may be authorized.
