NOTICE OF PUBLIC SCOPING MEETINGS and PRE-HEARING CONFERENCE for the Southern California Edison El Casco System Project Environmental Impact Report (EIR)

The California Public Utilities Commission (CPUC) is preparing an Environmental Impact Report (EIR) for Southern California Edison's (SCE) proposed El Casco System Project (Proposed Project). The CPUC, as the State lead agency under the California Environmental Quality Act, will be holding a pre-hearing conference followed by two public scoping meetings to obtain input from agencies and the public on the scope and content of the EIR. The pre-hearing conference will be conducted by the CPUC Administrative Law Judge to establish the scope and schedule for the proceeding. The meetings will be held at the following locations:

</tr>
</tbody>
</table>

All of the meeting locations listed above are wheelchair accessible. If other accommodations for the handicapped are required, such as sign language interpreters, please call the EIR public involvement manager at (877) 576-8342.

Background. SCE is proposing to construct the El Casco System Project. The El Casco System Project includes the proposed El Casco Substation site, upgrades to the Zanja and Banning Substations, and the SCE's Mill Creek Communications Site, upgrading of a total of 194 miles of existing 115 kV transmission line and associated structures, and the installation of fiber optic cables within existing conduits in public streets and on existing SCE structures between the Cities of Redlands and Banning. All portions of the Proposed Project are located within Riverside and San Bernardino Counties, California.

Project Information. Information regarding the Proposed Project and the CPUC's environmental review process, as well as Project documents, can be found at http://www.cpuc.ca.gov/environment/infor/aspen/elascoas/elasco.htm.

NCP Scoping Period. The 30-day NCP scoping period commenced on July 16, 2007, and ends on August 14, 2007. During this period, comments on the scope and content of the EIR may be provided at the pre-hearing conference and public scoping meetings noted above, sent via fax to the number noted below, or mailed to Jarylynne Mosley, CPUC, c/o Aspen Environmental Group, 30423 Canwood Street, Suite 215, Agoura Hills, CA, 91301. Postmarked no later than August 14, 2007. For more information regarding the Proposed Project or the environmental review process, please call or fax (877) 576-8342 or send an email to: elcasco@aspenenv.com.

**Ex Parte Communications**

- No private, unreported communications with decisionmakers (commissioners, advisor, or the ALJ) on substantive issues related to the proceeding.

- No such private substantive discussions with the ALJ at any time.

---

**Ex Parte Communications**

- Private substantive communications with commissioners require prior public notice and after-the-fact reporting, a create equal-time rights for all other parties.

- Such communications with commissioner’s advisors require after-the-fact reporting.
Ex Parte Communications

- E-mails and letters cannot be used as a way to get around these rules. The same requirements apply.

- Parties: do not send individual e-mails to the ALJ. Limit communications to procedural questions and copy all parties.

Information and Criteria List
El Casco System Project

Scoping Meetings
August 1, 2007 – Banning, CA
August 1, 2007 – Beaumont, CA

Meeting Agenda
- Welcome and Introduction
- Overview of the Proposed Project
- The California Environmental Quality Act (CEQA) Environmental Review Process
- Public Comments
- Meeting Conclusion

Purpose of Scoping
- To inform the public about an upcoming project for which an Environmental Impact Report (EIR) will be prepared
- To inform the public about the environmental review process
- To identify issues of concern
- To solicit input regarding the appropriate scope of issues, mitigation measures, and potential alternatives to be studied in the EIR

Key Players and Their Roles in the CEQA Process
- California Public Utilities Commission (CPUC): Lead Agency under California Environmental Quality Act (CEQA)
- Southern California Edison (SCE): Applicant
- Aspen Environmental Group: Environmental Consultant to the CPUC
What is the Proposed Project?

- SCE has filed an application for a Permit to Construct the El Casco System Project, which includes:
  - Construction of the El Casco Substation
  - Upgrades at the Zanja and Banning Substations
  - Upgrading the existing transmission lines and installation of new transmission lines between the El Casco Substation and the Banning Substation
  - Improving SCE’s telecommunication facilities in the project area

El Casco Project Area Map

Proposed El Casco Substation Site

- Looking south toward the proposed site for the El Casco Substation on the Norton Younglove Reserve. (Existing SCE towers are shown in the background.)

Sun Lakes Community

- Looking north toward the proposed site for the El Casco Substation and San Timoteo Creek on the Norton Younglove Reserve.
- Looking east toward Sun Lakes Community.
- Existing 115 kV subtransmission line through the Sun Lakes Community.
**Existing Conditions Along Route**

- Existing single-circuit wood poles going into Maraschino Substation. These will be replaced with new single-circuit steel poles.

**Possible Alternatives**

- Northerly 115 kV Subtransmission Line Route – Described in SCE’s Proponent’s Environmental Assessment (PEA)
- Alternative El Casco Substation Site – Site 38 as described in SCE’s PEA
- No Project Alternative — as required by CEQA
- Other alternatives identified during the scoping process, and during EIR preparation

**Project Purpose**

- Build electrical facilities necessary to serve forecasted demand in Calimesa, Beaumont, and the surrounding areas of unincorporated northern Riverside County
- Prevent overloading of existing transmission facilities
- Improve electrical reliability and operational flexibility in northern Riverside County

**California Public Utilities Commission**

- Application for a Permit to Construct (Application No. 07-02-022)
- Cost recovery and rate making
- CEQA Lead Agency
- Assigned Commissioner: – Dian Grueneich
- Administrative Law Judge: – Victoria Kolakowski
CEQA Environmental Review Process

Objectives
- Assess potential impacts of the proposed project
- Identify and analyze alternatives that would avoid or reduce potentially significant impacts
- Recommend mitigation measures that would help reduce potentially significant impacts
- Provide environmental information to decision makers
- Disclose potential impacts to the public

Decision to Prepare an EIR
- CEQA Lead Agency (CPUC) reviews the Application/PEA to determine the type of environmental analysis to be conducted for the project
- An EIR is prepared if there is evidence that the project may have potentially significant impacts on the environment

The EIR Process
- Distribute Notice of Preparation (NOP) for 30-day public scoping/review period
- Prepare Draft EIR
- Circulate the Draft EIR for public review (45-day public review period)
- Respond to comments and prepare Final EIR
- EIR Certification
Environmental Issue Areas

- Aesthetics
- Land Use/Planning
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Hazards/Hazardous Materials
- Hydrology and Water Quality
- Mineral Resources
- Noise
- Population and Housing
- Public Services and Utilities
- Traffic/Transportation
- Cumulative and Growth-Inducing Impacts

After EIR Completion

- After the Final EIR is issued, the CPUC will prepare a proposed Decision on the El Casco System Project
- 30 days after issuance of the proposed Decision, the CPUC will certify the EIR and issue its final Decision on the proposed project
- If the project or an alternative is approved, monitoring of adopted mitigation measures will be required

Making Comments

- Fill out and turn in a speaker card
- The facilitator will call you to the microphone individually
- You will have three minutes to make your comments
- Comments can also be provided in writing

EIR Scoping Comments

- Please focus your comments on environmental concerns
- Please provide input on issues that should be analyzed, possible alternatives, and potential mitigation
- Please avoid comments on the merits of the Project (pro or con)
Scoping Comments Must be Postmarked by August 14, 2007

California Public Utilities Commission

Be sure to include your name and address on all comments. Please write legibly.

For More Information:

- Check out our website: http://www.cpuc.ca.gov/environment/info/aspen/elcasco/elcasco.htm
- Visit repositories at five local area libraries including: Banning, Beaumont, Calimesa, University of Redlands Armacost Library, and Yucaipa
- E-mail us at elcasco@aspeneg.com
- Call the Project information line: (877) 576-8342

Thank you for your input.
APPENDIX B-3
Scoping Meeting Handouts
Fact Sheet

El Casco System Project

Southern California Edison (SCE) has filed an application (No. 07-02-022) with the California Public Utilities Commission (CPUC) for a Permit to Construct the El Casco System Project (Proposed Project). The Proposed Project would include construction of the El Casco Substation; upgrades to the Zanja and Banning Substations; transmission line upgrades and installation from the new El Casco Substation, located in the Norton Younglove Reserve, east to the Banning Substation in the City of Banning; and telecommunications improvements.

The objective of SCE’s Proposed Project is to build the electrical facilities necessary to serve forecasted demand in Calimesa, Beaumont, and the surrounding areas of unincorporated northern Riverside County, and to maintain safe and reliable service to customers in the area.

The Proposed Project includes the following components, which are detailed in the attached map.

Construction of the El Casco Substation. The new 14-acre El Casco 220/115/12 kV Substation would be located on a 28-acre plot within the Norton Younglove Reserve in Riverside County. This component would include associated 220 kV and 115 kV interconnections and new 12 kV distribution line connections (getaways). The substation would be designed with a low profile (structures no taller than 40 feet). Landscaping around the substation would incorporate primarily native vegetation and would be designed to screen views of the substation site.

Upgrades to the Zanja and Banning Substations. The 115 kV switchracks within the Zanja and Banning Substations, located in the Cities of Yucaipa and Banning, respectively, would be rebuilt to accommodate the new 115 kV subtransmission line, thereby allowing for at least two subtransmission lines to serve each substation at all times. This would reduce the likelihood of temporary power outages, which currently occur due to the fact that each substation is served by only one 115 kV subtransmission line at a time. If there is a problem with the primary (or “preferred”) line, a brief delay occurs before the secondary (or “emergency”) line can be connected. The upgrades to the Zanja and Banning Substations would eliminate this delay by providing a connection for a second 115 kV subtransmission line for each substation that would be active at all times. Replacement of the switchracks in both substations would occur within the existing fenced-in areas.

Transmission Line Upgrades and Installation. These upgrades would include replacement of existing single-circuit 115 kV subtransmission lines with new, higher capacity lines; tying in existing 115 kV and 220 kV lines to the new El Casco Substation (looping in); and installation of new 12 kV distribution line getaways at the El Casco Substation.

The proposed upgrades of the existing single-circuit subtransmission lines would include the following:

- Approximately 13 miles of single-circuit 115 kV lines would be replaced with 115 kV double-circuit lines between the new El Casco Substation and the Banning Substation, traversing the Cities of Banning,
Beaumont, and unincorporated Riverside County. Single-circuit 115 kV structures would be replaced with 115 kV double-circuit structures.

- Approximately 1.9 miles of subtransmission line would be replaced with new, higher capacity single-circuit 115 kV subtransmission lines and support structures within existing SCE Right-of-Ways (ROWs) in the City of Beaumont and unincorporated Riverside County.
- Approximately 0.5 miles of subtransmission line would be replaced with new, higher capacity single-circuit 115 kV subtransmission lines on existing support structures in the City of Beaumont.

The existing San Bernardino-Maraschino 115 kV subtransmission line would be looped into the new El Casco Substation 115 kV switchrack on two new approximately 900-foot long line segments between the existing ROW and the 115 kV switchrack. The Devers-San Bernardino No. 2 220 kV transmission line would be looped into the new 220 kV switchrack on two new approximately 500-foot long line segments between the existing ROW and the 220 kV switchrack. Two approximately 400-foot-long underground duct banks would be constructed for the 12 kV distribution line getaways, traversing beneath San Timoteo Creek and the railroad tracks. These distribution lines would eventually be connected to future distribution lines in the area.

**Telecommunications Improvements.** Proposed improvements to the telecommunications systems include the construction of a microwave system at the proposed El Casco Substation and SCE’s existing Mill Creek Communications Site in the San Bernardino National Forest, as well as installation of fiber optic cables within public streets and on existing SCE structures in the Cities of Banning, Beaumont, Calimesa, Redlands, and Yucaipa, as well as unincorporated parts of Riverside and San Bernardino Counties.

**Alternatives to the Proposed Project.** If it is determined that the Project would require the preparation of an Environmental Impact Report, the following alternatives developed by SCE in their Proponent’s Environmental Assessment, and additional feasible alternatives developed by the CPUC would be considered. SCE’s proposed alternatives include a Northerly 115 kV Subtransmission Line Route Alternative, and a Vista System Upgrade Alternative. The Northerly Alternative includes a 115 kV Subtransmission Line Route that begins at the El Casco Substation and proceeds east and southeast to the Banning Substation. The Northerly Alternative, unlike the Proposed Project, does not loop into the Maraschino Substation. The Vista System Upgrade Alternative includes the construction and replacement of several 115 kV Subtransmission lines as well as the addition of new transformers at both the Vista and Maraschino Substations. The Vista System Upgrade Alternative would not include the construction of the El Casco Substation.

**Additional Project Information.** For additional information on the proposed project, please contact Juralynne Mosley, CPUC Project Manager at 415-703-2210, jbm@cpuc.ca.gov.
