Mesa 500-kV Substation Project
CPUC Minor Project Change Form

Date Requested: July 23, 2019
Report No.: 07

Date Approved: Approval Agency: CPUC

Property Owner(s): SCE

Location/Milepost: 4628561E, V5127267, M5422379, 1825243E, M5008337, X9301368, V5008363, 4415620E, 4415631E, 4171874E, 2013401E, and 1547107E

Land Use/Vegetative Cover: Developed, bare earth, compacted gravel, and disturbed non-native grasses

Sensitive Resources: None

Modification From: ☑️ Specification ☑️ Drawing ☐ Mitigation Measure ☐ Plan/Procedure Other:

This activity is described Notice to Proceed Request–2 for Initial Project-Related Activities for the Mesa 500-kV Substation Project, Section 2.5 Telecom Line Relocations, and Final Environmental Impact Report, Mesa 500-kV Substation Project, Section 2.2.1.6, Telecommunications and Section 2.2.2, Telecommunications Routes.

Describe how project refinement deviates from current project. Include photos.

- **Original Condition:** Transmission Telecom Crews will need to access existing fiber splice cases located on existing poles, manholes or vaults in order to turn fibers to create communication paths between substations. There are approximately 12 locations located in multiple cities. The work will either be done at night or day in which it will take a 2 man crew approximately 4 hours to complete. The work will consist of the crew opening an existing case and re-connecting the additional fibers needed in order to create the path. There will be no ground disturbance. Permits have been submitted for the locations where we will need traffic control as other location are accessible through SCE R.O.W.

- **Justification for change:** Due to communications load, additional communications fibers are required at 4628561E, V5127267, M5422379, 1825243E, M5008337, X9301368, V5008363, 4415620E, 4415631E, 4171874E, 2013401E, and 1547107E.

- **Figure:** Attached to this document.
  - Figure. Minor Project Change Seven map set.

- **Environmental Impact:**

  This bare earth, compacted gravel, and heavily disturbed non-native grasses area provides no useful habitat for any wildlife or botanical species. Further, this location does not host cultural resources or paleontological resources at the surface. These areas are currently SCE R.O.W.s or public streets. Adding communications fibers at these locations will not be a significant additional project impact.

- **Concurrence:** the Final Environmental Impact Report, Mesa 500-kV Substation Project was consulted, as was the USACE Section 404 Permit (SPL-2015-0324), USFWS Biological Opinion (FWS-LA-15B0327-17F1426),
CDFW Streambed Alteration Agreement (1600-2016-0034-R5), SWRCB Section 401 Permit (16-019), NTPR-1 Biological Review, Cultural Resources Management Plan for the Mesa Substation Project, and Paleontological Resources Management Plan for the Southern California Edison Mesa 500 Kilovolt Substation Project to determine whether other agencies, municipalities, utilities, etc. would need to provide concurrence with this MPC. For this situation, no project measures or plans stipulate consultation with agencies other than the CPUC.

**Biological Resources:**
Developed, bare earth, compacted gravel, and disturbed non-native grasses.

RE: Mesa 500-kV Substation Project – Minor Project Change No. 7 Request: Additional Splice Work for Telecom Conduit Changes

Dear Ms. Rangel,

On July 23, 2019, Southern California Edison (SCE) submitted Minor Project Change (MPC) No. 7 Request to the California Public Utilities Commission (CPUC) for review. The proposed MPC would involve transmission telecom crews accessing 12 existing fiber splice cases located on existing poles, manholes, or vaults in order to turn fibers to create communication paths between substations. The 12 existing fiber splice cases are located in the Cities of Pasadena, San Gabriel, Bell Gardens, and Montebello. In the City of Pasadena, manhole M5008337 and vault V5008363 are located near the center divider of E. Foothill Boulevard and Santa Paula Avenue. Poles 4415620E, 4415631E, 4628561E, and 1825243E are in the SCE right-of-way. In the City of San Gabriel, poles 4171874E and 2013401E are in the SCE right-of-way. Pole 1547107E is in public right-of-way (ROW). In the City of Bell Gardens, manhole X9301368 is located on SCE property away from the street. In the City of Montebello, vault V5127267 and manhole M5422379 is in public ROW. Manhole M5422379 is located on the sidewalk.

The proposed work would either be completed at night or day and would take a 2-man crew with an equipment truck and splice lab approximately 4 hours to complete. The work would consist of the crew opening an existing case and re-connecting the additional fibers needed in order to create the path. Encroachment Permit applications have been submitted to the Cities of Pasadena, San Gabriel, Bell Gardens, and Montebello for the locations where SCE will need traffic control. Permits have been received from the Cities of Bell Gardens and Montebello. Work would not proceed in the Cities of Pasadena and San Gabriel prior to receipt of those permits. The following locations are not accessible through an SCE right-of-way:

- In the City of Pasadena: Manhole M5008337 and vault V5008363.
- In the City of San Gabriel: Pole 1547107E.
- In the City of Montebello: For vault V5127267, and manholes M5422379 and M5422379.

SCE would inform the cities of this work and obtain any required permits from the appropriate jurisdictions. Work would be conducted in the following timeframes:
In the City of Pasadena: Work will be conducted at night for manhole M5008337 and vault V5008363, work. For poles 4415620E, 4415631E, 4628561E, and 1825243E, work will be conducted during the day.

In the City of San Gabriel: For poles 4171874E and 2013401E, work will be conducted during the day. For pole 1547107E, work will be conducted at night.

In the City of Bell Gardens: For manhole X9301368, work will be conducted at night.

In the City of Montebello: For vault V5127267, work will be conducted at night. For manhole M5422379, work will be conducted during the day.

The fiber optic splice case work described above is proposed due to communications load, and therefore additional communications fibers are required at 4628561E, V5127267, M5422379, 1825243E, M5008337, X9301368, V5008363, 4415620E, 4415631E., 4171874E, 2013401E, and 1547107E.

The Mesa 500-kV Substation Project was evaluated in accordance with the California Environmental Quality Act (CEQA), and an Environmental Impact Report (EIR) was prepared by the CPUC. The CPUC issued a Permit to Construct the Project on February 9, 2017 (Decision 17-02-015). The mitigation measures (MMs) and applicant proposed measures (APMs) described in the EIR were adopted by the CPUC as conditions of Project approval. In August 2017 the CPUC adopted the Mitigation Monitoring, Compliance, and Reporting Plan (MMCRP) to ensure compliance with all APMs and MMs during project implementation.

This letter documents the CPUC’s evaluation of all activities covered in the MPC No. 7 Request. The CPUC has carefully reviewed this MPC request and has verified that the proposed activities adhere to all applicable APM and MM requirements. The evaluation process ensures that all APMs and MMs applicable to the location, and all activities covered in the MPC are implemented, as required in the CPUC’s decision. The evaluation process further ensures that the following criteria are met:

- The proposed change does not trigger additional discretionary permit requirements that are not defined in the EIR or MMCRP.
- The proposed change does not increase the severity of an impact or create a new impact, based on the thresholds used in the EIR.
- The proposed change is within the geographic scope of the study area utilized in the EIR.
- The proposed change does not conflict with any APM or MM, and the refinements would not result in a new conflict with any applicable guideline, ordinance, code, rule, regulation, order, decision, statute, or policy not already identified within the IS/MND.

The CPUC has determined that MPC No. 7 meets the above criteria. MPC No. 7 is approved by the CPUC for the proposed activities based on the factors described below.

**CPUC Evaluation of MPC No. 7 Request**

The CPUC evaluated SCE’s MPC Request No. 7 to verify that it fulfills the requirements of the MMCRP. In accordance with the MMCRP, the CPUC reviewed the request to confirm that no new impacts on sensitive resources, or increases in impact severity, would result from the
requested MPC activities. The following discussion summarizes this analysis for biological, cultural, paleontological, and other environmental resources, areas as well as aesthetics and visual resources.

Location of Ground Disturbance Areas
There will be no ground disturbance under MPC No. 7.

Aesthetics/Visual Impacts
MPC No. 7 does not include additional aboveground structures. Therefore, work under MPC No. 7 would not be expected to substantially degrade the surrounding viewshed. Additionally, construction activities would be temporary (approximately 4 hours total), and, therefore would not cause a permanent significant impact to visual resources.

Biological, Cultural, Paleontological Resources, and other Environmental Resources
MPC No. 7 would occur in areas with non-native vegetation and it is anticipated that all nesting birds in the vicinity of these location have fledged. However, if active nests are observed within the vicinity of the existing poles (4628561E, 1825243E, 4415620E, 4415631E, 4171874E, 2013401E, and 1547107E), vaults (V5127267, V5008363), or manholes (M5422379, M5008337, X9301368), SCE must avoid impacts to the nests by implementing the relevant protection measures of the MMCRP. These include surveying for and monitoring of active nests and other sensitive biological resources (MM BR-9) and implementing disturbance buffers and other measures in the Nesting Bird Management Plan (MM BR-11).

Work under MPC No. 7 would not occur in suitable natural habitat for any special status species, and the work areas do not overlap with USFWS Critical Habitat for any species. No ground disturbance would occur under MPC No. 7. Additionally, work would be located within the applicable Final EIR study areas, for sensitive resources, including special status animals and plants, wetlands, and other waters, and cultural and paleontological resources. In addition, no native vegetation or tree removal would occur under MPC No. 7.

No cultural or paleontological resources have been identified within MPC No. 7 work areas. There will be no ground disturbance under MPC No. 7. The work areas are currently SCE ROW’s or public streets. Using these areas to add communication fibers would not be a significant additional project impact for cultural or paleontological resources.

Construction activities under MPC No. 7 would be performed during daylight or nighttime hours. It is anticipated that the Cities of Pasadena, San Gabriel, Bell Gardens, and Montebello would require that SCE add communication fibers at night due to its short-term duration and to minimize potential impacts to transportation. SCE would set up appropriate traffic control in the City of Pasadena, for manhole M5008337 and vault V5008363, which are located near the center divider of E. Foothill Boulevard and Santa Paula Avenue. In the City of Montebello, for vault V5127267 and manhole M5422379, traffic control would be provided for a 1-lane closure. Traffic control for pedestrians will be provided as necessary for manhole M5422379, located on the sidewalk in the City of Montebello. In the City of San Gabriel, for pole 1547107E, traffic control will be provided for a 1-lane closure, with assistance for pedestrians as needed. Flaggers posted near the work locations would manage flow by assisting pedestrians and vehicles to
proceed through the work zones. Construction activities in the public roadway would take a 2-man crew with an equipment truck and splice lab approximately 4 hours to complete.

Manhole M5422379 is located on the sidewalk. During construction, SCE will ensure that one of these sidewalks will be available for public use. Any temporarily unavailable sidewalk will be marked, and pedestrian traffic control will be present to ensure the safety of non-project individuals when construction crews are at or near the sidewalks.

The Final EIR documents numerous ephemeral drainages (jurisdictional and non-jurisdictional) in a highly disturbed landscape. These drainages were identified in the Final EIR as experiencing temporary impacts related to project activities. Temporary impacts on these ephemeral drainages associated by MPC No. 7 activities would be consistent with the type and extent of impacts analyzed in the Final EIR. These drainages were identified in the Final EIR as being subject to temporary project-related impacts. The installation of communication fiber cables at the various existing fiber splice cases would not fall within drainage areas, so permanent impacts are not anticipated. Furthermore, work activities under MPC No. 7 would take place in areas that are already flat and paved and thus no alteration to existing drainages would occur. Nonetheless, SCE would be required to adhere to all measures and strategies described in their Stormwater Pollution Prevention Plan (SWPPP) and Streambed Alteration Agreement (SAA) to minimize impacts to water features site-wide.

**Permits**

Encroachment Permit applications have been submitted to the Cities of Pasadena, San Gabriel, Bell Gardens, and Montebello for the locations where SCE will need traffic control, or locations not accessible through SCE right-of-way. Permits have been received from the City of Bell Gardens and Montebello. Work will not proceed in the City of Pasadena and San Gabriel prior to receipt of those permits. The following locations are not accessible through an SCE right-of-way:

- In the City of Pasadena: Manhole M5008337 and vault V5008363.
- In the City of San Gabriel: Pole 1547107E.
- In the City of Montebello: For vault V5127267, and manholes M5422379 and M5422379.

Traffic control will be maintained as follows:

- In the City of Pasadena: For manhole M5008337 and vault V5008363, which are located near the center divider of E. Foothill Boulevard and Santa Paula Avenue, appropriate traffic control will be provided. For poles 4415620E, 4415631E, 4628561E, and 1825243E, traffic control is not required because these poles are located in the SCE right-of-way on SCE property.
- In the City of San Gabriel: For poles 4171874E and 2013401E, traffic control is not required because these poles are located in the SCE right-of-way. For pole 1547107E, traffic control will be provided for a 1-lane closure, with assistance for pedestrian access as needed.
- In the City of Bell Gardens: For manhole X9301368, traffic control is not required because this pole is located on SCE Property away from the street.
In the City of Montebello: For vault V5127267, traffic control will be provided for a 1-lane closure and pedestrian access will not be affected since the vault is located on the roadway. For manhole M5422379, which is located on the sidewalk, pedestrian and traffic control will be provided as necessary.

MPC No. 7 Conditions of Approval
MPC No. 7 is approved by the CPUC with conditions. The conditions presented below shall be met by SCE and its contractors:

1. All applicable Project MMs, APMs, compliance plans, and permit conditions shall be implemented. Some measures have on-going/time-sensitive requirements and shall be implemented prior to and during construction, where applicable.
2. Copies of all relevant permits, compliance plans, and this MPC, shall be available on site for the duration of construction activities.
3. SCE shall implement all appropriate erosion and sediment control BMPs for the MPC No. 7 refinement area as defined in the SWPPP, and as specified by the Qualified SWPPP Practitioner. Sediment and erosion control BMPs shall be properly maintained throughout the duration of construction activities, where appropriate.
4. All activities (e.g., grading, trenching, etc.) shall be monitored by CPUC-approved monitors in accordance with the MMCRP, where appropriate.
5. All complaints related to MPC No. 7 activities received by SCE shall be logged and reported immediately to the CPUC. This includes complaints relevant to traffic, as well as lighting, noise, vibration, dust, etc. Where feasible, complaints shall be resolved, depending on the nature of the complaint, through construction site or activity modifications. Complaints or disputes that cannot be modified through construction site or activity modifications shall be resolved through the dispute resolution communications processes described in the MMCRP.

Please contact me if you have any questions or concerns regarding this MPC approval.

Sincerely,

Connie Chen
CPUC Project Manager
