

A **visual simulation** of the Route D Alternative from Key Viewpoint 65 at Cuyamaca Peak. This view is to the west toward the intersection of Boulder Creek Road, Tule Springs Road and Cedar Creek Road. At a distance of 2.5 to 3 miles, the Route D transmission structures would be faintly visible as the route passes through the valley below. Under certain lighting conditions, the structures (and conductors) would be slightly more noticeable than on hazy days (as above). However, the graded maintenance pads cause the structures to be more noticeable.
