Visual Resources
Figure D.3-39

The **existing view** to the northeast toward the Oak Hollow Underground Alternative. This view is from the west gate to Oak Hollow. This alternative would include two cable poles at the east end of the valley (location indicated above). The underground route would generally follow the existing wood pole line visible in the image above, which would also be relocated underground (as an option). The existing landscape is predominantly rural in character and does not exhibit any built, industrial features.
