April 9, 2018

Ryan Stevenson  
Principal Advisor  
Regulatory Affairs  
Southern California Edison  
8631 Rush St, General Office 4 – 235E (2nd Floor)  
Rosemead, CA, 91770

RE: West of Devers Upgrade Project: Minor Project Refinement #10

Dear Mr. Stevenson,

On April 6, 2018, Southern California Edison (SCE) submitted a request for Minor Project Refinement (MPR) #10 for modifications to work areas approved under the California Public Utilities Commission (CPUC) Notice to Proceed (NTP) #1, June 29, 2017; and NTP #3, August 10, 2017, in support of the West of Devers Upgrade Project in the Cities of San Bernardino and Redlands, San Bernardino County, California.

The CPUC voted on August 18, 2016 to approve SCE’s West of Devers Upgrade Project (Decision D.16-08-017) and a Notice of Determination was submitted to the State Clearinghouse (SCH# 2014051041).

The CPUC also adopted a Mitigation, Monitoring, Compliance and Reporting Plan (MMCRP) to ensure compliance with all mitigation measures imposed on the West of Devers Upgrade Project during implementation. The MMCRP also acknowledges that temporary changes to the project, such as final project design and engineering or need for addition workspace, are anticipated and common practice for construction efforts of this scale and that a Minor Project Refinement request would be required for these activities. This letter documents the CPUC’s thorough evaluation of all activities covered in this Minor Project Refinement, and that no new impacts or increase in impact severity would result from the requested Minor Project Refinement activities.

Minor Project Refinements are reviewed for consistency with CEQA requirements and are located within the geographic boundary of the project study area. Minor Project Refinements do not create new or substantially more severe significant impacts, or conflict with any mitigation measure or applicable law or policy. Also, they do not trigger other permit requirements unless the appropriate agency has approved the change, and clearly and strictly comply with the intent of the mitigation measure or applicable law or policy.

Minor Project Refinement #10 for modifications to work area mapping approved under NTP#1 and NTP #3, is granted by CPUC based on the factors described below.

SCE Minor Project Refinement Request. Excerpts from the SCE Revised Minor Project Refinement request, received April 6, 2018 is presented below (indented):

SCE is requesting approval for modification to NTP #1 and NTP #3 work area mapping in the Cities of San Bernardino and Redlands.
New Work Area Required for Mountain View Material Yard Driveway and Temporary Power Conveyance in City of San Bernardino
The frontage area of the Mountain View Material Yard will be used to expand the existing driveway for material yard deliveries and to provide temporary power to the yard from an existing pole on Mountain View Avenue. The dimensions of the new work area are approximately 60 feet by 110 feet. The material yard front gate will be widened to 30 feet and the driveway approach to the gate will taper from 30 feet at the gate, down to the existing 18-foot driveway width at the existing curb. The existing curb and gutter will not be modified. The broken pavement and subbase of the existing 14-foot driveway will be replaced with Class II aggregate base, in accordance with City standards and approvals. The new work area will also be used to stage material and equipment during the installation of temporary power from the existing power pole on Mountain View Avenue. Only drive and crush impacts to the previously disturbed area are required for the installations. The City has approved the driveway widening from the existing edge of curb into the material yard and the use of the area for power conveyance. The temporary impacts to developed/disturbed land are 0.27 acre.

North side of San Bernardino Avenue east of San Bernardino Substation to Marigold Avenue in City of Redlands
An approximately 300-foot by 350-foot work area is required for material and equipment staging and construction of telecom route improvements east of the San Bernardino Substation, extending along the west and south sides of the new work area. An approximately 1,250-foot by 130-foot work area is required for material and equipment staging and construction of telecom route improvements east of the San Bernardino Substation, extending along the north side of San Bernardino Avenue to Marigold Avenue. The temporary impacts to developed/disturbed land are 4.31 acres.

South side of Citrus Avenue, from Nevada Street to Iowa Street in City of Redlands
An approximately 1,250-foot by 50-foot work area is required for material and equipment staging and construction of subtransmission route stringing improvements along the south side of Citrus Avenue from Nevada Street to Iowa Street. The temporary impacts to developed/disturbed land are 1.24 acres.

CPUC Evaluation of Minor Project Refinement Request
In accordance with the MMCRP, the subject Minor Project Refinement request was reviewed by CPUC to confirm that no new impacts or increase in impact severity would result from the requested Minor Project Refinement activities and that the subject request was within the geographic boundary of the Project study area. Additionally, the CPUC Environmental Monitor (EM) conducted a site visit of the requested work areas on April 9, 2018. The following discussion summarizes this analysis for agriculture, air quality, biological resources, cultural resources, geology and soils, hazards and hazardous materials, land use, noise, paleontological resources, traffic and transportation, visual resources, water resources, and wildland fire. A list of bulleted conditions is presented to define additional information and clarifications regarding mitigation requirements. In some cases, these items exceed the requirements of the Mitigation Measures (MMs) and Applicant Proposed Measures (APMs) and are based on specific site conditions and/or are proposed conditions by SCE.

Agriculture: No Important Farmland will be impacted with the implementation of this MPR.

Air Quality: During proposed construction, SCE shall implement the Fugitive Dust Control Plan approved by the CPUC on May 22, 2017, as well as the Exhaust Emissions Control Plan approved by CPUC on June 8, 2017. In addition, in compliance with MM AQ-1b, off-road equipment with engines larger than 50 horsepower shall have engines that meet or exceed U.S. EPA/CARB Tier 3 Emissions Standards. No additional impacts to air quality will occur with the implementation of MPR.

Biological Resources: SCE submitted biological resource survey information with the MPR #10 request. These new work locations were included in previous biological surveys for the Project. In addition, preconstruction
clearance surveys were conducted for the Mountain View Material Yard and Subtransmission/Telecom route, including the new work areas. The new work areas are in disturbed/developed land and do not include habitats supporting special-status plants or special-status wildlife. No trees have been identified for trimming or removal; however, if it is later determined that tree trimming or removal is needed, SCE will obtain any necessary permits from the Cities of San Bernardino and Redlands. Suitable substrates for nesting birds protected by the California Fish and Game Code and Migratory Bird Treaty Act, including trees, shrubs, man-made structures, and the ground surface, are located within the vicinity. Preconstruction surveys for nesting birds, and ongoing surveys and monitoring for nesting birds, will take place during the nesting season (January 1 – August 31). No additional impacts to biological resources are anticipated with the implementation of this MPR.

**Cultural Resources:** SCE submitted cultural resource information with the MPR #10 request. A Cultural Resources Management Plan (CRMP) has been completed for the West of Devers Upgrade Project and was approved by the CPUC in October 2017. The new work areas are located within the Project Area of Potential Affect (APE) and were covered within the record search data that was conducted during previous surveys and studies. The record search and survey results for the area were negative for cultural resources (SCE 2016). In the event of unanticipated discoveries, MM CL-1b, MM CL-1c, MM CL-1d and the CRMP requirements would be implemented. No impacts to cultural resources are anticipated with the implementation of this MPR.

**Geology and Soils:** SCE conducted geotechnical studies to evaluate faults, landslides and unstable slopes, and soil characteristics as outlined in MMs G-1a, G-2a, and G-5a. The geotechnical survey reports were reviewed and approved by the CPUC on August 17, 2017. No additional impacts to geology and soils will occur with the implementation of this MPR.

**Hazardous Materials:** As required by MM HH-1a, SCE prepared and submitted a Hazardous Materials and Waste Management Plan to the CPUC on September 27, 2017. Hazardous materials used and stored on site for the duration of construction activities and will be managed according to the Plan. A Soil Management Plan has been developed consistent with MMs HH-2a and HH-3a to provide guidance for the proper handling, onsite management, and disposal of impacted soil that might be encountered during construction activities, including soil samples to be collected in construction areas where the land has historically or is currently being used for agriculture and would be subject to ground disturbance by the project. SCE’s Soil Management Plan was combined with the Hazardous Materials and Waste Management Plan described above. Also, SCE’s contractor submitted information including written procedures for fueling and maintenance of construction equipment and an Emergency Response Plan. No additional impacts from hazards or hazardous materials will occur with the implementation of this MPR.

**Land Use:** As required by MM LU-1a, a Construction Notification Plan was prepared by SCE and approved by CPUC on May 22, 2017. The Plan identified the procedures to ensure that SCE will inform property and business owners of the location and duration of construction. The Plan includes provisions for public noticing including mailers, newspaper advertisements, public venue notices, and includes the establishment of a public liaison and toll-free information hotline. No additional impacts to land use will occur with the implementation of this MPR.

**Noise:** Best Management Practices for construction noise management will be implemented as outlined in MM N-1a to reduce construction noise exposure at noise-sensitive receptors and to avoid possible violations of local rules, standards, and ordinances during construction. Construction noise shall be confined to daytime, weekday hours (7:00 a.m. to 6:00 p.m.) or an alternative schedule developed by SCE based on its coordination with local jurisdiction. Construction traffic and helicopter flights shall be routed away from residences and schools, where feasible. No additional impacts to noise will occur with the implementation of this MPR.

**Paleontological Resources:** A Paleontological Resource Mitigation and Monitoring Plan (PRMMP) has been completed for the West of Devers Upgrade Project and was approved by the CPUC on May 9, 2017. The use of
additional work areas for material and equipment staging and construction of the telecom and subtransmission route described in this Minor Project Refinement #10 are no different than what was described in NTP #1 and NTP #3. In the event of unanticipated discoveries, MM PAL-1d and the PRMMP requirements would be implemented. No additional impacts to paleontological resources will occur with implementation of this MPR.

**Traffic and Transportation:** Consistent with MM T-1a and MM T-1b, Construction Transportation and Traffic Control Plans have been developed and approved. The Construction Transportation Plan describes timing of commutes, methods of reducing crew-related traffic, and other methods for reducing construction-generated additional traffic on regional and local roadways. No additional impacts to traffic and transportation will occur with the implementation of this MPR.

**Visual Resources:** The use of additional work areas for material and equipment staging and construction of the telecom and subtransmission route described in this Minor Project Refinement #10 are no different than what was described in NTP #1 and NTP #3 and are temporary. No additional impacts to visual resources will occur with the implementation of this MPR.

**Water Resources:** As required by MM WR-2a, SCE developed and submitted an Erosion Control Plan to the CPUC and BLM. The Erosion Control Plan was incorporated into the Stormwater Pollution Prevention Plan (SWPPP), which will be kept onsite and readily available on request. SCE submitted the SWPPP to the CPUC on May 25, 2017. Any changes necessitated by this MPR will be incorporated into the SWPPP document. No additional impacts to water resources will occur with the implementation of this MPR.

**Wildland Fire:** SCE submitted a Fire Management Plan on February 10, 2017 to satisfy the conditions of MM WF-1a and the Plan was approved by the CPUC on July 18, 2017. This Fire Management Plan has been submitted to local fire departments. The new work areas are in disturbed/developed land within urbanized areas. No additional impacts to wildland fire will occur with the implementation of this MPR.

**The conditions noted below shall be met by SCE and its contractors:**

- All applicable Project MMs, APMs, compliance plans, and permit conditions shall be implemented. Some measures have on-going/time-sensitive requirements and shall be implemented prior to and during construction where applicable.

- Copies of all relevant permits, compliance plans, and this Minor Project Refinement shall be available on site for the duration of construction activities. All permits and plans shall be made available to the CPUC EM upon request.

- SCE will conduct pre-construction surveys prior to construction, including surveys for nesting birds from January 1 to August 31. If special-status resources are identified, SCE will implement the applicable mitigation measures and/or permit conditions, as determined in coordination with the CPUC, BLM, CDFW, USFWS, or other applicable regulatory agencies. In addition, a Biological Monitor will conduct spot check sweeps weekly thereafter.

- All crew members shall be WEAP trained prior to working on the Project. A log shall be maintained on-site with the names of all crew personnel trained. The WEAP training brochure can be provided in Spanish or other languages if appropriate. All participants will receive a hard-hat sticker for ease of compliance verification.

- No movement or staging of construction vehicles or equipment shall be allowed outside of the approved areas. If additional temporary workspace areas or access routes, or changes in technique and mitigation implementation to a lesser level are required, a Minor Project Refinement request shall be submitted for CPUC review.
Sincerely,

Billie Blanchard  
CPUC Environmental Project Manager
