West side of Nevada Street, south of Almond Avenue and north of Lugonia Avenue, in the City of Redlands

Five subtransmission structures proposed for construction on the east side of Nevada Street, between Almond Avenue and Lugonia Avenue, have been redesigned for installation along the west side of Nevada Street, south of Almond Avenue and north of Lugonia Avenue, as shown on Figure 2-2.

The temporary impacts to developed/disturbed land associated with the redesign are 0.84 acres.

Biological Resources:

A desktop analysis of publicly available data and relevant project data was conducted to determine the potential for special-status species to occur at the new work locations. Since included in early iterations of project design, these new work locations were included in the study area for previous biological surveys. In addition, preconstruction clearance surveys were conducted for the Subtransmission/Telecom route, including the new work areas. (https://www.sceprojects.com/modules/fileUploadForm/dis_fileUploadForm.cfm?featureID=429&filterOptionID=4&moduleID=537&defID=2162855).

Burrowing Owl – The work areas do not include suitable habitat for this species.

Jurisdictional Waters – The work areas do not intersect jurisdictional waters.

Special-status Plants – The work areas are developed and disturbed land, isolated from native habitats, and do not support special-status plants.

Regulated Trees – No regulated trees will be impacted by construction.

Nesting Birds – Suitable substrates for nesting birds protected by the California Fish and Game Code, including trees, shrubs, man-made structures, and the ground surface, are located within the vicinity.

Desert Tortoise – The work areas are not located within the range of this species.

Listed Riparian Birds – The work areas are not located within 500 feet of habitats for the listed riparian birds.

Stephens’ Kangaroo Rat – The work areas do not include suitable habitat for this species.

Special-status Bats – No loose bark or cavities were observed on trees in the vicinity.

Coastal California Gnatcatcher – The work areas do not include suitable habitat for this species.
Golden Eagle – Based on aerial habitat assessments and protocol surveys conducted for the project, no suitable nesting habitat for golden eagles is located within 2 miles of the work areas.

Special-status Terrestrial Herpetofauna – The work areas do not include habitat supporting special-status herpetofauna.

Special-status Small Mammals – The work areas do not include habitat supporting special-status mammals.

American Badger, Desert Kit Fox, Ringtail – The work areas do not include habitat supporting these species.

**Cultural Resources:**
The new work areas above are located within the WOD APE and were covered within the record search data that was conducted during previous WOD surveys and studies. The record search and survey results for the area were negative for cultural resources.
