**Mission Road, California Street, and Barton Road in Loma Linda**

The alignment of the distribution duct bank along Mission Road, California Street, and Barton Road has been adjusted to avoid permanent impacts to the jurisdictional wetland along Barton Road, shown in Figure 1.

The temporary impacts to agricultural/developed/disturbed land associated with the redesign total 0.42 acre (0.31 agricultural/0.11 developed disturbed).

**Mission Road in Loma Linda**

Due to the distribution duct bank adjustment along Mission Road described above, three new temporary work areas are required to facilitate the installation of structures V5652226, M5652227, and M565228, as shown in Figure 2.

The temporary impacts to developed/disturbed land associated with the redesign total 0.08 acre.

**Lugonia Avenue and Bryn Mawr in Redlands**

Due to underground utility conflicts encountered in the approved work area, the location of Subtransmission Pole 4795727E on Lugonia Avenue, along the San Bernardino–Redlands–Timoteo 66-kV subtransmission line, requires adjustment to the west, as shown in Figure 3.

The temporary impacts to developed/disturbed land associated with the redesign total 0.12 acre.

**Nevada Street north of Lugonia Avenue in Redlands**

Due to underground utility conflicts encountered in the approved work area, the location of Subtransmission Pole 4795729E was adjusted to the south along the San Bernardino-Redlands-Tennessee line, on Nevada Street north of Lugonia Avenue, as shown in Figure 4.

The temporary impacts to developed/disturbed land associated with the redesign total 0.04 acre.

**Biological Resources:**

A desktop analysis of publicly available data and relevant project data was conducted to determine the potential for special-status species to occur at the new work locations. Since included in early iterations of project design, these new work locations were included in the study area for previous biological surveys. In addition, preconstruction clearance surveys were conducted for the Subtransmission/Telecom route, including the new work areas.
Burrowing Owl – The work areas do not include suitable habitat for this species.

Jurisdictional Waters – A jurisdictional wetland and jurisdictional water feature flow west along the south side of Barton Road at California Street, as shown in Figure 1. The distribution duct bank alignment has been shifted to avoid open cut construction within the jurisdictional wetland and connection to existing Pole 4290042E. Instead the distribution duct bank will be installed outside the limits of the jurisdictional wetland, under an existing culvert to the west, and Pole 4448319E will be installed south of the culvert, to avoid impacts to the jurisdictional wetland and waters. The jurisdictional wetland will be conspicuously staked for avoidance during construction activities.

Special-status Plants – The work areas are developed and disturbed land, isolated from native habitats, and do not support special-status plants.

Regulated Trees – No regulated trees will be impacted by this construction.

Nesting Birds – Suitable substrates for nesting birds protected by the California Fish and Game Code, including trees, shrubs, man-made structures, and the ground surface, are located within the vicinity. Nesting bird sweeps will occur prior to construction in the work areas during nesting bird season.

Desert Tortoise – The work areas are not located within the range of this species.

Listed Riparian Birds – The work areas are not located within 500 feet of a riparian habitat, therefore impacts to riparian birds are not anticipated.

Stephens’ Kangaroo Rat – The work areas do not include suitable habitat for this species.

Special-status Bats – No loose bark or cavities were observed on trees in the vicinity.

Coastal California Gnatcatcher – The work areas do not include suitable habitat for this species.

Golden Eagle – Based on aerial habitat assessments and protocol surveys conducted for the project, no suitable nesting habitat for golden eagles is located within 2 miles of the work areas.

Special-status Terrestrial Herpetofauna – The work areas do not include habitat supporting special-status herpetofauna.

Special-status Small Mammals – The work areas do not include habitat supporting special-status mammals.

American Badger, Desert Kit Fox, Ringtail – The work areas do not include habitat supporting these species.

**Cultural Resources:**
The new work areas above are located within the WOD APE and were covered within the record search data that was conducted during previous WOD surveys and studies. The record search and survey results for the area were negative for cultural resources. *Cultural Resources Management Plan for Southern California Edison Company’s West of Devers Transmission Line Upgrade Project, Riverside and San Bernardino Counties, California.* 2016. Rosemead, CA: Southern California Edison.

**Traffic:**
The work areas have been authorized for construction by the local jurisdictions after review and approval of traffic control plans, encroachment permit applications, and field changes. Traffic control will be implemented accordingly.
