

Path: P:\PROJECTS\MPO_P\Projects\Riverside\TransmissionReliability\Project_WLD\Map\CPUCC20170706_Data_Request_6\SubmitRTRP_CUPUC_DataRequest_6_UG_Alt_2.mxd

Description
 Buffer areas depicted represent the extent of the general location in which the construction and ground disturbing activity will occur for a temporary or permanent Project feature as described and dimensioned in table 2.5-3 of the RTRP DEIR, and are intended to provide users of this data a general area in which to limit the evaluation of the Project impacts as required by the CPUC or other Governmental/Resource Agency for Project permitting requirements per CEQA/NEPA or other regulations and codes. The intention of the buffer area is to allow the temporary or permanent construction area to eventually be located to a specific area within the buffer that will facilitate construction and avoid impacts to known and/or future identified ESAs, to the extent feasible.

Riverside Transmission Reliability Project
Alternative 2: Limonite - Wineville Underground

- | | |
|---------------------------|---|
| Tubular Steel Pole (TSP) | OH |
| Lattice Steel Tower (LST) | UG |
| Riser pole (TSP) | Ground Disturbance Area Data (GDAD) Hybrid Route |
| Vault | Ground Disturbance Area Data (GDAD) Alternative 2 |
| Rack | |

Use Limitations
 Buffer areas are tied directly to a temporary or permanent project feature, as identified per the Project's engineering design and construction description; the accuracy of this data is relative to the accuracy level of the engineering design. If the Project's engineering design is modified and/or updated and the project feature is relocated, the buffer and disturbance area to construct that feature will be relocated with it.
