Based on a sample of customer bills in 2016 across the SDG&E service area, these graphics show the distribution of seasonal electricity bills for CARE* and non-CARE customers.

The boxes are centered on the median usage. The size of the box indicates the distribution between the first and third quartile.

How different is your bill from that of another household in a different climate zone?

* CARE is the legislatively mandated program to provide lower rates for income-qualified households.
